

Huawei Zeng, Ph.D.

Research Interests:

Obesity related colon cancer is a significant global health concern and the impact of specific dietary components on colon cancer risk has been well recognized. Dr. Zeng's main area of research is to determine the molecular mechanisms of cancer-preventive nutrients in foods. This focus presently centers on dietary fiber / diet timing and gut microbiome, and the development of new molecular biomarkers for obesity related colon cancer prevention. Currently, Dr. Zeng is studying the impact of dietary components on preventing obesity-related, colonic inflammation and cancer. This research will contribute to the evidence base for the USDA Dietary Guidelines for Americans (DGA) recommendations for colon health through diet and a healthy lifestyle.

Dr. Zeng is also investigating the impact of human genetic variation on optimal nutritional intake. Single nucleotide polymorphisms (SNPs) are a primary component of human genetic variation. To determine the diet that best fits certain SNPs, He examines the effects of hemochromatosis, selenoproteins and vitamin D receptor genotypes on the absorption and utilization of iron, selenium, calcium and other nutrients.

Education:

B.Sc.,Biology, Xiamen University, Xiamen, China, 1984

M.Sc., Biology, Xiamen University, Xiamen, China, 1987

Ph.D., Molecular Biology, University of Wyoming, Laramie, WY, USA, 1996

Professional Experience:

1987-1989	Researcher, Xiamen Fishery Research Institute, Xiamen, China
1989-1991	Visiting Scholar, Dept. Biological Sci., SUNY-Buffalo, Buffalo, NY.
1991-1996	Research Assistant, Dept. Molecular Biology, Univ. Wyoming, Laramie, WY.
1996-1999	Intramural Research Training Fellow, Laboratory of Molecular & Cellular Biology, NIDDK, NIH, Bethesda, MD.
1999-present	Research Molecular Biologist, USDA ARS Grand Forks Human Nutrition Research Center, Grand Forks, ND.
2000-present	Adjunct Professor, Dept. Biochemistry & Molecular Biology, Univ. North Dakota. USA

Contribution of 6 Novel DNA sequences to GenBank:
