INTRODUCTION (File 1)

This dataset provides dietary intakes on 6 nonconsecutive days by women 19 to 50 years of age of all incomes and their children 1 to 5 years of age surveyed between April 1986 and March 1987. The data were collected using 1-day dietary recalls as part of the 1986 Continuing Survey of Food Intakes by Individuals (CSFII 1986) conducted by the U.S. Department of Agriculture (USDA).

Individuals contacted as part of the CSFII 1986 were asked to provide 6 days (waves) of dietary data over a 1-year period. Each day of data was collected at approximately 2-month intervals. The first day of data was collected using a personal interview; subsequent days of data were collected by telephone. Not all of the women and children who agreed to participate and who provided the first 1-day recall completed all 6 days. Of the women who completed the first 1-day dietary recall, 76 percent completed at least 4 days, 69 completed at least 5 days, and 52 percent completed all 6 days.

The CSFII was initiated in 1985 to provide timely information on the adequacy of diets of selected population groups and to provide early indications of dietary changes. Data from the CSFII allow policymakers to formulate research-based policies for nutrition and food intervention programs, consumer education, food fortification, and regulatory activities.

The CSFII complements the larger nationwide food consumption surveys conducted by USDA approximately every 10 years. The surveys in 1936-37, 1942, 1948 (urban only), and 1955 collected information on food consumption at the household level. An individual intake component was added to the spring quarter of the 1965-66 survey, and the Nationwide Food Consumption Survey 1977-78 (NFCS 1977-78) included individual intakes throughout the entire year.

The CSFII is a major component of the National Nutrition Monitoring System (NNMS), a set of related Federal activities intended to provide regular information on the nutritional status of the U.S. population (1). The Food and Agriculture Act of 1977 (P.L. 95-113, Title XIV) called for new initiatives in research on human nutrition and food consumption patterns and directed USDA and the Department of Health and Human Services (DHHS) to develop the NNMS. The CSFII was designed to be responsive both to this Legislation and to recommendations made in reports of recent studies pertaining to food consumption research (2, 3). A number of organizations commented on or contributed to the development of the CSFII questionnaire. These include the National Center for Health Statistics and the Food and Drug Administration of DHHS, the Environmental Protection Agency, the Economic Research Service of the USDA, the House Agriculture Committee, the House Committee on Science and Technology, and several universities and food advocacy groups.

National Analysts (a division of Booz, Allen and Hamilton, Inc.), a private firm in Philadelphia, Pennsylvania, conducted the CSFII 1986 under contract with the Human Nutrition Information Service (HNIS), USDA. National Analysts designed the sample; collected the information; edited, coded, and keyed the data; and prepared the final data tape. HNIS defined the information to be collected; provided technical information such as food codes, gram weights of household measures of food, and the nutrient composition of foods; and monitored all aspects of the contract. National Analysts conducted the CSFII 1985 also.

METHODOLOGY

Sample Design

The CSFII 1986 sample was drawn from all private households in the conterminous United States. The survey was designed to provide a multistage stratified area probability sample representative of the 48 conterminous States. The stratification plan was organized using estimates of the U.S. population in 1985. The stratification plan took into account geographic location, degree of urbanization, and socioeconomic considerations. Each successive sampling stage selected increasingly smaller, more specific locations.

The 48 States were grouped into the 9 census geographic divisions; then all land areas within the divisions were divided into 3 urbanization classifications: central city, suburban, and nonmetropolitan (see Glossary). The stratification process resulted in a total of 60 strata--17 central-city, 28 suburban, and 15 nonmetropolitan--which correspond to the geographic distribution, urbanization, and density of the population within the conterminous United States as reported by the Bureau of the Census. The distribution of these strata is shown below:

Census region and division	Central city	Suburban	Nonmetro-politan
	--------number of strata--------		
Northeast:			
New England.....	1	1	1
Middle Atlantic.....	3	5	1
Midwest:			
East North Central..	3	6	2
West North Central..	1	1	2
South:			
South Atlantic.....	2	5	3
East South Central..	1	1	2
West South Central..	2	3	2
West:			
Mountain.....	1	1	1
Pacific.....	3	5	1
Total.....	17	28	15

Counties, cities, or parts of cities within each stratum were grouped together into smaller, relatively homogeneous units, called primary sampling units (PSU), based on political, economic, and demographic characteristics and/or geographical proximity. Each selected PSU was divided geographically along census boundaries into smaller clusters, known as area segments, containing a minimum of 100 housing units. A total of 206 area segments were drawn into the sample. Each area segment was selected with a probability proportional to the ratio of the number of housing units in the area segment to the total number of housing units in the PSU.

The 206 area segments were prelisted prior to the CSFII 1985 to identify the existing housing units within the area boundaries at the time of the first year's survey. To insure comparability between 1985 and 1986, the housing units drawn into the CSFII 1986 sample came from the same 206 area segments. However different housing units were selected from the CSFII 1986. The prelisted number of housing units in the area as of 1985, together with census information, served as the basis for determining the initial number of housing units to be selected for the CSFII 1986 sample from that area. In addition, new housing units which came into existance between 1985 and 1986 surveys had a chance of being sampled.

Data Collection

To contact individuals in housing units selected as part of the sample, trained interviewers made a minimum of three personal visits plus up to eight telephone calls to each household having a telephone. Households without telephones received a minimum of six personal visits (five in rural areas). At each household, the interviewer conducted a screening interview to determine if the household was eligible to participate in the survey.

Eligible households were those containing at least one woman 19 to 50 years of age at the time of initial contact. In eligible households, all women within this age range and their children 1 to 5 years, if any, were invited to be interviewed and to participate in the yearlong survey panel. A letter of introduction was provided, and respondents were informed that the full survey involved the collection of 6 days (waves) of intake data--each day at approximately 2-month intervals.

In each wave, the interviewing process included two major steps: (1) collection of information about the household and (2) collection of information on food intake. Separate intake records were used for each woman and for each child.

Interviewers were instructed to complete all interviews in a single household during the same visit or call, to complete the household schedule first and then the required intake records, and to obtain intake data about a woman and her children for the same 24-hour period. Interviewers were provided with instructions on what to do if deviation from this pattern was necessary.

Multiple contacts were made when needed to complete interviews in eligible households. Interviewing of a household was not considered complete until the household schedule and intake records for all eligible individuals who agreed to participate were obtained.

The first wave of data (wave 1) was collected by personal interview from 1,352 households; subsequent waves of data were collected by telephone, if possible. The proportion of household interviews conducted by telephone in waves 2 and 3 was 89 percent; in waves 4 to 6 it was 88 percent. In households without telephones or where the respondent requested to be interviewed in person, the data for waves 2-6 were collected in an in-person interview.

Only households that contained a member who was interviewed in wave 1 were recontacted in subsequent waves. Within these households, only women and children who completed interviews in wave 1 were eligible for reinterview in waves 2-6. Respondents who completed wave 1 were retained in the survey even if they missed one or more days in waves 2-6. Respondents who moved out of their area during the survey were not followed. Individuals who became members of participating households after wave 1 were not eligible for participation regardless of their age.

In wave 1, information on the characteristics of the household was collected from the primary age-eligible woman in the household (the household informant). The female head of the household was always the household informant if she was age-eligible. In households where the female head was not age-eligible or where she did not take part in the survey, interviewers collected data on household characteristics from the age-eligible woman who was the main meal planner/preparer or the age-eligible woman who could best answer questions about the household. Household characteristics included the previous year's household income before taxes; participation in food programs; age, education, occupation, and employment status of the male head of household; household size; tenancy; usual amount of money spent on food; and each household member's sex, age, and relationship to the female head of the household.

In waves 2-6, interviewers were instructed to attempt a reinterview within 7-10 days of two months's time from the date of the last interview. At each interview in waves 2 to 6, the interviewer first obtained updated information on the household from the woman who provided the household information in wave 1. This included information on changes in household membership since the last interview, usual amount of money spent on food, program participation, and changes in household income.

In all waves, each woman interviewed provided information on her own food intake as well as that of her children 1 to 5 years of age. Information was collected on all food eaten either at home or away, the time of day food was eaten, what the eating occasion was called, and the use of salt at the table. The main meal planner/preparer was asked about the use of fat (including type) and salt in food preparation and about the form in which the food was brought into the home (commercially frozen, canned, or bottled or in another form). Foods were designated as coming from the home food supply or as obtained and eaten away from home (see Glossary). A Food Instruction Booklet, developed by National Analysts, was used by the interviewers to help respondents adequately describe foods and amounts eaten. The interviewers used standard household measuring cups and spoons and a ruler during the interview to help respondents estimate quantities of foods and beverages consumed. Respondents kept the cups, spoons, and ruler for use during subsequent interviews.

Each woman interviewed also provided information on her age, race, physiological status (pregnancy and lactation), employment, occupation, education, use of special diets, and use of vitamin and mineral supplements. Information on children's special diets and use of supplements was provided by their mother/ caretaker. Children were assigned the race of their mother/caretaker.

In wave 1, eligible households were scheduled for interview in a manner designed to provide representativeness of intake data by day of the week over all households. In subsequent waves, interviewers were instructed to collect data for a household on different days of the week. For example, if the data for a household were collected for a Tuesday in wave 1 and for a Friday in wave 2, the household was asked to provide data for one of the other five days in wave 3, if possible.

In Wave 1, 1,352 households participated and provided useful data. A total of 1,451 women and 509 children satisfactorily completed the first CSFII 1985 food intake interview. Not all of these individuals completed all six waves as shown below:

Wave	Individuals completing	
	Women	Children
	-------number*--------	
1	1,451	509
2	1,182	393
3	1,103	340
4	1,052	332
5	1,011	311
6	984	328

* unweighted

Sample Weights

The sample was designed to be self-weighting. That is, strata, PSU, area segments, and housing units were selected to be representative of the population. Thus, the number of eligible households in each cell in the sample was designed to represent the same proportion as the respective number of households in each cell in the population. However, adjustments to the sample were required because not all eligible households agreed to participate, not all eligible women and children in eligible households agreed to participate, not all interviews yielded complete dietary information, and not all participants in wave 1 completed each subsequent wave. Weighting factors were applied to data from completed intake records to adjust for these sources of nonresponse. Weighting procedures involved the following steps:

(1) In wave 1, household weights were determined by dividing the actual number of interviewed households in the segment by the expected number of eligible occupied households in the segment. The resulting household weights were developed so that the weighted number of households would equal the unweighted number of households, except for rounding differences.

In subsequent waves, the household weights for each area segment were adjusted to make that area segment account for the same proportion of households as it had in wave 1.

(2) The development of individual weights was a two-step process. Separate initial weights were required for children and for women. The adjustments for individuals were made on a wave by wave basis. Because some individuals within a household who participated in wave 1 provided data for a subsequent wave, while others did not, some women and children carry different weights in wave 1 than in subsequent waves. In each wave, the adjustment for eligible children for whom complete dietary intake information was not collected was made on an age basis within each area segment. All eligible children in participating area segments were divided into two age groups: those 2-1/2 years and under and those over 2-1/2 years. Children in each age group were listed by area segment. If complete dietary intake data were provided for all eligible children within an area segment, each child was given an initial weighting factor of 1.00. In area segments having children with missing dietary data, participating children received initial weighting factors that summed to the number of eligible children within the same age group in that segment. This was done by dividing the number of eligible children by the number of participating children. For example, if dietary data were missing or incomplete for one of five eligible children in the same area segment and age group, the other four children for whom intake data were obtained were assigned an initial weighting factor of 1.25.

In each wave, the adjustment for eligible women for whom complete dietary intake information was not collected was made within a sample household. First, the number of age-eligible women and the number of participating women in each household were determined. Second, in households where all eligible women participated, each woman was given an initial weighting factor of 1.00. In households where not all of the age-eligible women participated, the women in that particular household who did participate received weighting factors that summed to the number of eligible women in that household.

(3) In each wave, the initial weighting factor for each child or woman was then multiplied by the household weight to obtain the final individual weight.

The unweighted and weighted counts of households and individuals by wave are shown below:

	Wave					
	1	2	3	4	5	6
	number					
Households:						
Unweighted.....	1,352	1,123	1,046	1,002	964	946
Weighted.....	1,351	1,123	1,046	1,002	964	946
Children:						
2-1/2 years or under						
Unweighted.....	132	98	89	82	81	84
Weighted.....	148	111	98	87	87	88
Over 2-1/2 years						
Unweighted.....	377	295	251	250	230	244
Weighted.....	399	323	274	267	242	261
Women:						
Unweighted.....	1,459	1,221	1,042	995	910	902
Weighted.....	1,503	1,277	1,101	1,050	961	956

Data Processing

FOOD CODING--Completed schedules were coded by the contractor using food codes, gram weight conversions, and coding guidelines provided by HNIS (see File 6, Manual of Food Codes for Individul Intakes). Each food and beverage reported as ingested during the 24-hour survey period was assigned a code number, and amounts of foods ingested were converted to their weight in grams. Items that could not be coded by the contractor using available information were referred to HNIS for resoluation. New codes we re created by HNIS as needed.

The food coding system used for the NFCS 1977-78 was revised for the CSFII 1985. The revisions to the coding system generally fall into the following categories:

(1) Addition of new products and elimination of products no longer marketed.

(2) Elimination of products reported infrequently in the 1977-78 survey.

(3) Addition of new codes to provide more detailed specifications.

(4) Deletion of product distinctions where the level of detail was more than the respondent might reasonably be expected to know, such as whether breads were made with enriched flour.

(5) Combination under a single food code of items that were previously coded separately, such as several varieties of fish having very similar nutrient composition values.

(6) Separation of certain foods coded as mixtures in 1977-78, such as coffee with cream, into their component parts.

(7) Modification of food code descriptions to clarify the contents of mixtures, such as whether the mixture contained a vegetable high in vitamin A and whether a sauce was part of the mixture.

(8) Separation into multiple codes of some similar foods coded together in 1977-78, such as low-sodium and regular products.

(9) Refinement of recipes used for coding food mixtures. For example, many recipes containing butter in 1977 were changed to contain margarine in 1985.

(10) Implementation of a system in 1985 to accommodate responses to the new questions asked of the main meal planner/preparer on use of salt and fat in food preparation. A response that salt or fat was added to an item in cooking was translated into an assumed amount of salt or fat added to the recipe and was coded accordingly. Fat was coded by type. (These codes were used only for the individual providing the information, not for other household members.)

(11) Revision of gram equivalents, used to translate household measures of food intake into grams, because of improved data.

NUTRIENT DATA BASE--The amount of each nutrient in each food eaten was calculated using the weight (in grams) of that food and the nutritive value of that food (per 100 grams) from a nutrient data base (see File 7, USDA Nutrient Data Base for Individual Intake Surveys). The intake records and the nutrient data base were linked by the food codes. Amounts of each nutrient in all foods reported by an individual were summed to obtain the nutrient intake for the day.

The nutrient data base used to calculate nutrient intakes was developed by HNIS for use in this survey. The data base contains representative nutrient values for 100 grams of the edible portion of more than 5,000 food items. The values for most items containing two or more ingredients were calculated from the data for the ingredients using representative recipes.

The nutrient data base includes values for food energy and 29 nutrients and other dietary components, as well as a calcium conversion factor (see Glossary). Fourteen of the nutrients included were available in the data base for the NFCS 1977-78: protein, total fat, carbohydrate, vitamin A (as international units), ascorbic acid, thiamin, riboflavin, niacin, vitamin B-6, vitamin B-12, calcium, phosphorus, magnesium, and iron. Additional nutrients and dietary components included for the first time in 1985 are saturated fat, monounsaturated fat, polyunsaturated fat, cholesterol, dietary fiber, vitamin A (as retinol equivalents), alcohol, carotenes, vitamin E, folacin, zinc, copper, sodium, potassium, and moisture (water).

The values for food energy, nutrients, and other dietary components came from the USDA Nutrient Data Base for Standard Reference (4) and the USDA Nutrient Data Bank (5). Most of the values are supported by laboratory analyses. Nutrient values not available from laboratory analysis were imputed from data for other forms of the food or from data for similar foods. Most of the components have a relatively strong research base. Data for some components, however, are less well founded.

Values for the beta-carotene content of foods have not been reported frequently, and existing reports are often not clear as to whether a value is only for beta-carotene or whether it includes other carotenoids. Values in the data base for carotene are those assumed by HNIS in arriving at the values for total vitamin A and should not be interpreted as representing solely beta-carotene. Only limited data are available for vitamin E and dietary fiber. Data for vitamin E (as alpha-tocopherol equivalents) are available mainly for basic staple or commodity food items. Values for dietary fiber generally represent either total dietary fiber by direct determination or the sum of insoluble fiber and soluble fiber in foods for which data exist.

Nutrient intakes in 1986, compared with those of NFCS 1977-78, reflect data on improved quality, as well as changes in nutrient content of foods attributable to new varieties and species and to new enrichment and fortification levels. Major changes between 1977-78 and 1986 are as follows:

(1) The data base for magnesium and vitamins B-6 and B-12 is more reliable; values for many of the foods for which data existed before are now based on more analyses, and many additional foods are now covered. This improved data base may contribute to either apparent increases or apparent decreases in amounts of these nutrients in foods.

(2) Calcium values are higher in some breakfast cereals because more calcium has been added.

(3) Phosphorus values for some foods are higher because of added phosphorus compounds. For example, bacon now has phosphate added to reduce shrinkage during cooking. Phosphorus in several breakfast cereals increased as more calcium was added in the form of calcium phosphate.

(4) Iron values are higher for white flour, white bread, and other products made with white flour because of a change in enrichment standards. Iron values in the data base for meat and for milk-based infant formulas are lower because of new and improved data. Iron values for dried fruit are lower partly because of better data and partly because of the higher moisture content of the dried fruit.

(5) Vitamin A values are higher for carrots, sweetpotatoes, and other deep-yellow vegetables because of the development of new varieties that are more intense in color and have a higher content of vitamin A. Values in the data base for fruits are lower because of improved data.

DATA CLEANING--Data were subjected to computer-assisted cleaning and checking by the contractor. Dietary intake records that were known to be incomplete were examined. Individuals' heights and weights were compared with the 2nd and 98th percentiles of individuals of the same age group and sex in the NFCS 1977-78 as a check for reasonableness. The gram weight of each individual's total intake of food and intakes of food energy, protein, fat, carbohydrate, calcium, iron, and ascorbic acid were checked for reasonableness in a similar manner. Also, the gram weight of each food reported was checked against reasonable maximums established by HNIS on a food group basis. Data that fell outside the limits set as reasonable were verified by checking the original questionnaire and were corrected if in error.

DERIVATION OF CALCULATED VARIABLES

Calculated by Human Nutrition Information Service (Sections 1-14 below)

1. Household income as a percent of poverty (6)

```
                1985 household income x 100
% Poverty = ---------------------------
            ((N-1) 1800) + 5250
```

where N = household size, found on RT 10, Col 40-41
1985 household income is found on RT 10, Col 21-25

Value is expressed as a whole number with decimal places dropped, not rounded. The expected range of nonmissing values for this variables is 0-1905.

2. Usual Amount of Money Spent Per Week on Food Brought Into the Home (By Wave)

For Wave 1:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 10 Col 157 = 1 and RT 10 Col 162 = 1), then:

Usual amt. spent = (RT 10 Col 153-156) - (RT 10 Col 158-161)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 10 Col 157 = 2 and RT 10 Col 162 = 2), then:

```
Usual amt. spent    (RT 10 Col 153-156) - (RT 10 Col 158-161)
                 =  ----------------------------------------
on food at home                       4.3
```

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 10 Col 157 = 1 and RT 10 Col 162 = 2), then:

```
Usual amt. spent                         (RT 10 Col 158-161)
                 = (RT 10 Col 153-156) - -------------------
on food at home                                    4.3
```

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 10 Col 157 = 2 and RT 10 Col 162 = 1), then:

```
Usual amt. spent   (RT 10 Col 153-156)
                 = ------------------- - (RT 10 Col 158-161)
on food at home             4.3
```

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT 10 Col 157 = 1 and RT 10 Col 162 = 0), then:
Usual amt. spent on food at home = (RT 10 Col 153-156)
If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 10 Col 157 = 2 and RT 10 Col 162 = 0), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 10 Col 153-156)}}{4.3}$$

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 10 Col 157 = 8 or if RT 10 Col 162 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 10 Col 157 = 9 or if RT 10 Col 162 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of nonmissing values for this variable is 0-9997.

For Wave 2:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 15 Col 73 = 1 and RT 15 Col 78 = 1), then:
Usual amt. spent = (RT 15 Col 69-72) - (RT 15 Col 74-77)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 73 = 2 and RT 15 Col 78 = 2), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 69-72)} - \text{(RT 15 Col 74-77)}}{4.3}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 73 = 1 and RT 15 Col 78 = 2), then:

$$\text{Usual amt. spent on food at home} = \text{(RT 15 Col 69-72)} - \frac{\text{(RT 15 Col 74-77)}}{4.3}$$

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 73 = 2 and RT 15 Col 78 = 1), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 69-72)}}{4.3} - \text{(RT Col 74-77)}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT 15 Col 73 = 1 and RT 15 Col 78 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 69-72)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 73 = 2 and RT 15 Col 78 = 0), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 69-72)}}{4.3}$$

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 73 = 8 or if RT 10 Col 78 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 73 = 9 or if RT 10 Col 78 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of nonmissing values for this variable is 0-9997.
For Wave 3:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 15 Col 158 = 1 and RT 15 Col 163 = 1), then:

Usual amt. spent = (RT 15 Col 154-157) - (RT 15 Col 159-162)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 158 = 2 and RT 15 Col 163 = 2), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 154-157 - (RT 15 Col 159-162)}}{4.3}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 158 = 1 and RT 15 Col 163 = 2), then:

$$\text{Usual amt. spent on food at home} = \text{(RT 15 Col 154-157)} - \frac{\text{(RT 15 Col 159-162)}}{4.3}$$

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 158 = 2 and RT 15 Col 163 = 1), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 154-157)}}{4.3} - \text{(RT 15 Col 159-162)}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT 15 Col 158 = 1 and RT 15 Col 163 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 154-157)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 158 = 2 and RT 15 Col 163 = 0), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 154-157)}}{4.3}$$

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 158 = 8 or if RT 10 Col 163 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 158 = 9 or if RT 10 Col 163 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of non-missing values for this variable is 0-9997.

For Wave 4:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 15 Col 243 = 1 and RT 15 Col 248 = 1), then:

Usual amt. spent = (RT 15 Col 239-242) - (RT 15 Col 244-247)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 243 = 2 and RT 15 Col 248 = 2), then:

$$\text{Usual amt. spent on food at home} = \frac{(\text{RT 15 Col 239-242}) - (\text{RT 15 Col 244-247})}{4.3}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 243 = 1 and RT 15 Col 248 = 2, then:

$$\text{Usual amt. spent on food at home} = (\text{RT 15 Col 239-242}) - \frac{(\text{RT 15 Col 244-247})}{4.3}$$

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 243 = 2 and RT 15 Col 248 = 1), then:

$$\text{Usual amt. spent on food at home} = \frac{(\text{RT 15 Col 239-242})}{4.3} - (\text{RT 15 Col 244-247})$$

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT 15 Col 243 = 1 and RT 15 Col 248 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 239-242)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 243 = 2 and RT 15 Col 248 = 0), then:

$$\text{Usual amt. spent on food at home} = \frac{(\text{RT 15 Col 239-242})}{4.3}$$

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 243 = 8 or if RT 10 Col 248 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 243 = 9 or if RT 10 Col 248 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of non-missing values for this variable is 0-9997.

For Wave 5:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 15 Col 328 = 1 and RT 15 Col 333 = 1), then:

Usual amt. spent = (RT 15 Col 324-327) - (RT 15 Col 329-332)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 328 = 2 and RT 15 Col 333 = 2), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 324-327)} - \text{(RT 15 Col 329-332)}}{4.3}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 328 = 1 and RT 15 Col 333 = 2), then:

$$\text{Usual amt. spent on food at home} = \text{(RT 15 Col 324-327)} - \frac{\text{(RT 15 Col 329-332)}}{4.3}$$

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 328 = 2 and RT 15 Col 333 = 1), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 324-327)}}{4.3} - \text{(RT 15 Col 329-332)}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT Col 328 = 1 and RT 15 Col 333 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 324-327)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 328 = 2 and RT 15 Col 333 = 0), then:

$$\text{Usual amt. spent on food at home} = \frac{\text{(RT 15 Col 324-327)}}{4.3}$$

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 328 = 8 or if RT 10 Col 333 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 328 = 9 or if RT 10 Col 333 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of non-missing values for this variable is 0-9997.
For Wave 6:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 15 Col 413 = 1 and RT 15 Col 418 = 1), then:
Usual amt. spent = (RT 15 Col 409-412) - (RT 15 Col 414-417)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 413 = 2 and RT 15 Col 418 = 2), then:

```
Usual amt. spent   (RT 15 Col 409-412) - (RT 15 Col 414-417)
                 = ----------------------------------------
on food at home                      4.3
```

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 413 = 1 and RT 15 Col 418 = 2, then:

```
Usual amt. spent                         (RT 15 Col 414-417)
                 = (RT 15 Col 409-412) - -------------------
on food at home                                   4.3
```

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 413 = 2 and RT 15 Col 418 = 1), then:

```
Usual amt. spent   (RT 15 Col 409-412)
                 = ------------------- - (RT 15 Col 414-417)
on food at home             4.3
```

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT Col 413 = 1 and RT 15 Col 418 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 409-412)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 413 = 2 and RT 15 Col 418 = 0), then:

```
                                   (RT 15 Col 409-412)
Usual amt. spent on food at home = -------------------
                                             4.3
```

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 413 = 8 or if RT 10 Col 418 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 413 = 9 or if RT 10 Col 418 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of non-missing values for this variable is 0-9997.

3. Usual Amount of Money Spent per Week on Food Bought and Eaten Away from Home (By Wave)

For Wave 1:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 10 Col 167 = 1), then:

Usual amt. spent on food away from home = (RT 10 Col 163-66)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 10 Col 167 = 2), then:

$$\text{Usual amt. spent on food away from home} = \frac{\text{(RT 10 Col 163-166)}}{4.3}$$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 10 Col 167 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 10 Col 167 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 2:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 83 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 79-82)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 83 = 2), then:

$$\text{Usual amt. spent on food away from home} = \frac{\text{(RT 15 Col 79-82)}}{4.3}$$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 83 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 83 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 3:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 168 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 164-167)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 168 = 2), then:

$$\text{Usual amt. spent on food away from home} = \frac{\text{(RT 15 Col 164-167)}}{4.3}$$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 168 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 168 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 4:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 253 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 249-252)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 253 = 2), then:

$$\text{Usual amt. spent on food away from home} = \frac{\text{(RT 15 Col 249-252)}}{4.3}$$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 253 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 168 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 5:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 338 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 334-337)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 338 = 2), then:

$$\text{Usual amt. spent on food away from home} = \frac{\text{(RT 15 Col 334-337)}}{4.3}$$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 338 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 338 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 6:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 423 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 419-422)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 423 = 2), then:

$$\text{Usual amt. spent on food away from home} = \frac{\text{(RT 15 Col 419-422)}}{4.3}$$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 423 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 423 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

4. Body Mass Index

$$BMI = \frac{\text{weight in kilograms}}{(\text{height in meters})2}$$

$$\text{weight kilograms} = \frac{(\text{RT 20 Col 135-137})}{2.2}$$

$$\text{height in meters} = \frac{((\text{RT 20 Col 138})\text{x } 12) + (\text{RT 20 col 139-140})}{39.37}$$

If weight (RT 20 Col 135-137) or height (RT 20 Col 138-140) is "don't know" (998), then BMI = 99.98.

If weight or height is "no answer" (999), then BMI = 99.99.

If weight is "don't know" and height is "no answer," or vice versa, then BMI = 99.99.

Calculated for participating women only. Variable is expressed in 4 characters with 2 implied decimal places. The expected range of nonmissing values for this variable is approximately 10.00-40.00.

5. Meal Planner/Preparer

Is the individual the main meal planner/preparer?

If (RT 20 Col 8-9) = (RT 20 Col 29-30), then answer is yes (1).

If (RT 20 Col 8-9) NE (RT 20 Col 29-30), then answer is no (0).

6. Race of children

7. National Origin of Children

Children are assigned the race and national origin of their mother/caretaker. The screener ID for each child's mother/caretaker is given on the child's RT 20 Col 90-91. This number is matched to the screener ID (RT 20, Col 33-34) on the female respondent's record to identify the mother/caretaker. The codes for race and for national origin on her record are then ascribed to the child.

8. Employment status of the male head of household

If RT 10 Col 142 = 1 or 2 and RT 10 Col 146-147 = 35-97, then employment status = 1 (full-time).

If RT 10 Col 142 = 0 or 3-7 and RT 10 Col 143 = 1 and RT 10 Col 146-147 = 35-97, then employment status = 1 (full-time).

If RT 10 Col 142 = 1 or 2 and RT 10 Col 146-147 = 1-34, then employment status = 2 (part-time).
If RT 10 Col 142 = 0 or 3-7 and RT 10 Col 143 = 1 and RT 10 Col 146-147 = 1-34, then employment status = 2 (part-time).

If RT 10 Col 142 = 0 or 3-7 and RT 10 Col 143 = 2, then employment status = 3 (not employed).

If RT 10 Col 142 = 8 or 9, then employment status = 8 (not reported).

If RT 10 Col 142 = 0-7 and RT 10 Col 146-147 = 98 or 99, then employment status = 8 (not reported).

9. Employment status of female respondent:

If RT 20 Col 93 = 1 or 2 and RT 20 Col 97-98 = 35-97, then employment status = 1 (full-time).

If RT 20 Col 93 = 0 or 3-7 and RT 20 Col 94 = 1 and RT 20 Col 97-98 = 35-97, then employment status = 1 (full-time).

If RT 20 Col 93 = 1 or 2 and RT 20 Col 97-98 = 1-34, then employment status = 2 (part-time).

If RT 20 Col 93 = 0 or 3-7 and RT 20 Col 94 = 1 and RT 20 Col 97-98 = 1-34, then employment status = 2 (part-time).

If RT 20 Col 93 = 0 or 3-7 and RT 20 Col 94 = 1 and RT 20 Col 97-98 = 1-34, then employment status = 3 (not employed).

If RT 20 Col 93 = 8 or 9, then employment status = 8 (not reported).

If RT 20 Col 93 = 0-7 and RT 20 Col 97-98 = 98 or 99, then employment status = 8 (not reported).

10. Nutritive values, n-day average

For each nutrient, the average intake was determined by summing the values for each of available intake data (RT 40 Col 116-475) and dividing the sum by the number of days.

11. Wave completed? (by wave, waves 2-6)

This is a 2-category variable (wave not completed, wave completed).

12. Number of waves completed

This is the sum of the number of waves in which the respondent participated. The range of possible values is 1-6.

13. Household Monthly Income

For waves 2-6, values for household monthly income were derived by asking the respondent if there had been any change in income since the last interview. If so, how much more or less? The amount of change was added to or substracted from the previously reported income. In this documentation, "MINC" refers to monthly income.

Wave 1
MINC 1 = (RT 10, col. 192-196)

```
Wave 2
If (RT 15, col. 108) = blank,                 MINC 2 = blank

If (RT 15, col. 108) NE blank, then

     If (RT 10, col. 192-196) = 99998,         MINC 2 = 99998

     If (RT 10, col. 192-196) = 99999,         MINC 2 = 99999

     If (RT 15, col. 108) = 8,                 MINC 2 = 99998

     If (RT 15, col. 108) = 9,                 MINC 2 = 99999

14. Imputed Yearly Household Income for Households Not Reporting 1985 Income

Of the 1,352 households in the CSFII 1986 all-income sample, 131 (9.7 percent) did not make 1985 household income figures available. The possible reasons were (1) refused, (2) did not know, and (3) not a household in 1985.

For these households, 1985 household income was imputed based on households with similar characteristics participating in the survey using a statistical regression model technique. The procedure tested the hypothesis that selectivity bias existed, i.e., that factors associated with both the likelihood of nonreporting and the level of household income existed (see for example: G.S. Maddala, Limited-Dependent and Qualitative Variables in Econometrics, 1983, Cambridge University Press, New York). The hypothesis was rejected at the 0.05 level of statistical significance.

A linear regression model relating 1985 household income to several household and personal characteristics available in the CSFII 1986 sample was estimated by Ordinary Least Squares using the Statistical Analysis System (SAS). The selection of variables and functional form was guided by standard labor economic and econometric concerns, both theoretical and practical. (see for example; Ronald Oaxaca, "Male-Female Wage Differentials in Urban Labor Markets," International Economic Review, Vol. 14, No. 3, October 1973).

For households that did not make 1985 income figures available, household income was imputed based on household and personal characteristics which were available for the male head of household and the oldest female respondent.

Regression coefficients were estimated from income-reporting households. Specifically 1985 household income, in thousands of dollars, was:

```
Income 85 = 14.57 - 9.95 * MHED
              11.53 * MHED2
            - 12.60 * SCHOOL

```

The associated regression statistics were:

N = 1,184

R - Square = 0.49

Adjusted R - Square = 0.47

F Statistic = 18.61

The regression variables were defined as follows:

MHED = Male head's education, in years, divided by 10. If no male head, MHED = 0.

MHED2 = MHED**2.

SCHOOL = Oldest female respondent's education, in years, divided by 10.

SCHOOL2 = SCHOOL**2.

EXPM = Work experience of male head: (Age in years - (MHED * 10) - 6)/10. If no male head, EXPM = 0.

EXPM2 = EXPM**2.

EXPF = Work experience of oldest female respondent: (Age in years - (SCHOOL * 10) - 6)/10.

EXPF2 = EXPF**2.

MHS = 1 If male head completed high school but not college.
= 0 Otherwise.

MCOL = 1 If male head completed college.
= 0 Otherwise.

FHS = 1 If oldest female respondent completed high school but not college.
= 0 Otherwise.

FCOL = 1 If oldest female respondent completed college.
= 0 Otherwise.

CHILDREN = Number of children in household age 1 to 18.

MPART = 1 If male head worked between 0 and 35 hours per week in last three months.
= 0 Otherwise.

FPART = 1 If oldest female respondent worked between 0 and 35 hours per week in last three months.
= 0 Otherwise.

MLF = 1 If male head was employed, on layoff, or looking for work last week.
= 0 Otherwise.

FLF = 1 If oldest female respondent was employed, on layoff, or looking for work last week.
= 0 Otherwise.

MULTFEM = 1 If more than one female age 19-50 years present in the household.
= 0 Otherwise.

U2 = 1 If suburban household.
   = 0 Otherwise.

U3 = 1 If rural household.
   = 0 Otherwise.
(Central city was the base.)

R2 = 1 If Midwest region household.
   = 0 Otherwise.

R3 = 1 If Southern region household.
   = 0 Otherwise.

R4 = 1 If Western region household.
   = 0 Otherwise.
(Northeast was the base.)

T2 = 1 If renting dwelling.
   = 0 Otherwise.

T3 = 1 If occupying residence without payment of cash.
   = 0 Otherwise.
(Owning dwelling was the base.)

FARM = 1 If household owns a farm.
     = 0 Otherwise.

MHEAD2 = 1 If no male head present.
       = 0 Otherwise.

H2 = 1 If oldest female respondent's self-appraised health is
      excellent, very good, or good.
   = 0 Otherwise.

E2 = 1 If oldest female respondent's origin is Hispanic.
   = 0 Otherwise.
(Non-Hispanic origin was the base.)

RA2 = 1 If oldest female respondent's race is black.
    = 0 Otherwise.

RA3 = 1 If oldest respondent's race is "other."
    = 0 Otherwise.
(White race was the base.)

OCCM1 to OCCM7, male head's occupation, and OCCF1 to OCCF7, oldest female respondent's occupation:

If Occupational Classification System (1980) Occupation Code was
003-199, OCCM1 OCCF1 = 1.
                     = 0 Otherwise.
(Managerial and Professional specialty occupations),

(203-389, Technical, sales, and administrative support occupations were the base.)

403-469, OCCM3 OCCF3 = 1.
                     = 0 Otherwise.
(Service occupations)

```
473-499, OCCM4 OCCF4 = 1.
                     = 0 Otherwise.
(Farming, forestry, and fishing occupations)

503-699, OCCM5 OCCF5 = 1.
                     = 0 Otherwise.
(Precision production, craft, and repair occupations)

703-889, OCCM6 OCCF6 = 1.
                     = 0 Otherwise.
(Operators, fabricators, and laborers)

x = 999, OCCM7 OCCF7 = 1.
                     = 0 Otherwise.
(Occupation not reported)

MHEDB = MHED * RA2.

   MHED2B = MHEDB**2.

   SCHOOLB = SCHOOL * RA2.

SCHOOL2B = SCHOOLB**2.

EXPMB = EXPM * RA2.
EXPM2B = EXPMB**2.

EXPFB = EXPF * RA2.

EXPF2B = EXPFB**2.

SCHOOLN = SCHOOL * MHEAD2.

SCHOOL2N = SCHOOLN**2.
SCHOOLNB = SCHOOL * RA2 * MHEAD2
SCHLN2B - SCHOOLNB2**2.

EXPFN = EXPFN * MHEAD2.

EXPFN2 = EXPFN**2.

EXPFBN = EXPF * RA2 * MHEAD2.

EXPFN2B = EXPFBN**2.
```

Two households which did not make 1985 income figures available also did not make available the female respondent's education level. For these respondents, the mean sample education level of 13.0 years was arbitrarily assigned in order to impute their 1985 household income.

Recommended Dietary Allowances, 1980 (7)

Sex and age (years)	Food energy	Protein	Fat-soluble vitamins		
			Vitamin A		Vitamin E

GLOSSARY

Age - Calculated from date of birth as reported by the household informant.

Alpha-tocopherol equivalent - See "Vitamin E."

Calcium conversion factor - A factor that expresses the amount of calcium in a given milk product, i.e., food codes beginning with 1, as a proportion of the amount of calcium in the same amount (weight) of fluid whole cow's milk. For example, the calcium conversion factor for cheddar cheese was calculated by dividing the amount of calcium in 100 grams of cheddar cheese (721 milligrams) by the amount of calcium in 100 grams of fluid milk (119 milligrams) resulting in a calcium conversion factor of 6.06. For food codes not beginning with 1, the calcium conversion factor was set to 1 and has no meaning. The calcium conversion factor is found in positions 109-112 of record type 30.

Carotenes - Beta-carotene and other provitamin A carotenoids (see Vitamin A).

Central city - See "Urbanization."

Dietary fiber - Total dietary fiber including both the insoluble fraction (neutral detergent fiber) and the soluble fraction (for example, gums in cereal grains and pectin in fruits and vegetables).

Dietary intake - See "Food intake."

Eating occasion - Any report of eating or drinking by a respondent. Each change in time of eating reported on the questionnaire was considered to be a separate eating occasion.

Female head of household - Person indicated as such by the household informant; usually the wife of the male head of household if a male head was present.

Folacin - Total folate activity.

Food intake - All beverages (except water) and foods ingested by the respondent. Does not include inedible parts of foods (such as bones, rinds, and seeds); uneaten portions of food; or vitamin, mineral, or other supplements.

Food obtained and eaten away from home - Any food or beverage ingested by a respondent that did not come from the home food supply. Food obtained away from home and carried home to be eaten, such as take-home pizza, was considered part of the home food supply. See "Home food supply."

Geographic division - An area of the conterminous United States as defined by the U.S. Department of Commerce for the 1980 Census of Population. The nine census geographic divisions and their States are as follows:

East North Central: Illinois, Indiana, Michigan, Ohio, Wisconsin.

East South Central: Alabama, Kentucky, Mississippi, Tennessee.

Middle Atlantic: New Jersey, New York, Pennsylvania.

Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming.

New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont.

Pacific: California, Oregon, Washington.

South Atlantic: Delware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia.

West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

West South Central: Arkansas, Louisiana, Oklahoma, Texas.

Home food supply - Foods and beverages ingested at home and food items carried from home and eaten elsewhere, such as those in picnics and packed lunches.

Household - A group of individuals who regularly occupy a house, an apartment, or a room or group of rooms that constitute a housing unit; included persons tempo rarily absent, such as those who were in the hospital or traveling. Group quarters such as rooming houses, military barracks, and institutions were not included in the survey.

Household informant - The household member who gave information on household characteristics such as income, food expenditures, and participation in food assistance programs; usually the female head of household.

Household size - Number of individuals in a household. See "Household."

Income - Household informant's estimate of the total income from all sources, before taxes, of all household members in 1985. Called "household income."

Lactating female - A respondent who at the time of the interview was breast-feeding a child born since January 1, 1983.

Male head of household - Person indicated as such by the household informant; usually the husband of the female head of household.

Main meal planner/preparer - Person identified by the household informant as most responsible for planning and preparing the household's meals.

Midwest - See "Region."

Mother/caretaker - The mother or guardian of a child respondent or the person most responsible for that child.

Niacin - Nicotinic acid and nicotinamide present in foods. Does not include niacin converted from dietary tryptophan, a niacin precursor.

Nonmetropolitan areas - See "Urbanization."

Northeast - See "Region."

Nutrient density - Amount of nutrient per 1,000 kilocalories of food energy intake.

Nutrient intake - Nutrient content of all foods and beverages (except water) ingested by the respondent. Vitamin, mineral, and other supplements are excluded.

One-day dietary recall - A recall of beverages and foods ingested during the day preceding the interview--the 24 hours from 12:00 a.m. (midnight) to 11:59 p.m.

Pregnant female - A respondent who at the time of the interview answered, "Yes," to the question, "Are you pregnant?"

Race - Self-reported by adult respondents as white, black, Asian/Pacific Islander, or Aleut/Eskimo/ American Indian. Children were assigned the race of their

mother/caretaker.

Recommended Dietary Allowances (RDA) - Levels of nutrient intakes considered by the Food and Nutrition Board of the National Academy of Sciences to be adequate to meet the nutritional needs of practically all healthy individuals (7). Intakes below RDA are not necessarily inadequate, but the risk of inadequacy increases to the extent that intake is less than the recommended level.

Region - An area of the conterminous United States as defined by the U.S. Department of Commerce for the 1980 Census of Population. The four census regions and their States are as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

Midwest (formerly North Central): Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia.

West: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

Retinol equivalents - See "Vitamin A."

Snack - Any eating occasion designated by the respondent as a snack, a coffee break, or a beverage break.

South - See "Region."

Suburban areas - See "Urbanization."

Supplements - Vitamins and minerals ingested by respondents in a form other than in food or beverage. Not included in food and nutrient intake data.

Urbanization - Based on metropolitan statistical areas (MSA) defined by the U.S. Department of Commerce for the 1980 Census of Population. The degrees of urbanization used in this report are as follows:

Central city: A city which has a population of 50,000 or more and is the main city within an MSA.

Suburban area: Generally within the boundaries of an MSA but not within the legal limits of the central city.

Nonmetropolitan area: Any area not within an MSA.

Vitamin A - Vitamin A activity derived from both preformed vitamin A (retinol) and provitamin A carotenoids. Values in tables are expressed as international units (IU) and as retinol equivalents (RE). One IU equals 0.3 micrograms of retinol, 0.6 micrograms of beta-carotene, or 1.2 micrograms of other carotenoids having vitamin A activity. One RE equals 1 microgram retinol, 6 micrograms of beta-carotene, or 12 micrograms of other provitamin A carotenoids.

Vitamin E - Vitamin E activity derived from alpha-, beta-, and gamma-tocopherol and alpha-tocotrienol. Value is expressed as alpha-tocopherol equivalents. One alpha-tocopherol equivalent equals 1 milligram of alpha-tocopherol, 2 milligrams of beta-tocopherol, 10 milligrams of gamma-tocopherol, or 3.3 milligrams of alpha-tocotrienol.

Weighting factors - Factors applied to data from completed questionnaires to compensate for differing response rates among the primary sampling units and among individuals of similiar ages.

West - See "Region."

DATASET CHARACTERISTICS AND FORMAT--CSFII 1986, 6 WAVES

DATASET CHARACTERISTICS

Logical record length: 475
Record format: Fixed block

FILE STRUCTURE

The CSFII 1986 6-wave data are in a hierarchical file containing seven types of records. The record type is located in columns 10-11 of every record.

Record types 10 and 15 contain data pertaining to the household, such as basic household characteristics and information obtained during the screening process that was used to determine survey eligibility. There is one record type 10 and one record type 15 for each household. Record type 10 has basic data from the first wave of data collection (wave 1) plus some calculated variables for waves 2-6. Record type 15 has updated data from waves 2-6. Columns 2-6 of these record types contain the household identification number, which uniquely identifies each household participating in the survey.

There is one record type 20 for each member of the household. Thus, each household unit may contain more than one record type 20. Record type 20 contains personal data, but no intake data, for each individual household member whether or not they were eligible to participate and, if they were eligible, whether or not they did participate. Each household member is uniquely identified by the household identification number found in columns 2-6 and their household grid number found in columns 8-9. The screener identification number found in columns 33-34 may also be used to identify survey participants within a household. The records of women age 19-50 participating in the survey have screener identification numbers of 10, 20, 30, 40, 50, or 60. The records of their children age 1-5 who were participants have screener identification numbers beginning with the same tens digit as their mother. For example, a participant having a screener identification number of 10 is the mother of the participants having screener identification numbers of 11 and 12. All records of nonparticipants in wave 1 have blanks in columns 33-34; these people have no record types 25, 30, 40, or 45 for waves 2-6. Many users of this data may want to omit persons with a blank screener identification number. Participation in the later waves is indicated by a result code of 1 in columns 255, 305, 355, 405, and 455 for waves 2-6, respectively.

Records types 25, 30, 40, and 45 contain intake data for participating individuals. A single record type 25 contains a participant's daily nutrient intakes expressed as percentages of the 1980 Recommended Dietary Allowances by wave. There is one record type 25 for each wave 1 participant. Each record type 25 includes all six waves. If an individual did not participate in a later wave, the percentage fields for that wave are blank. Alternatively, one can also determine wave participation by examining the participation code for each of waves 2-6 found in columns 116, 187, 258, 329, and 400, respectively. Each record type 30 contains data that describe an individual food item. There is one record per food item reported by each participating individual in each wave of participation. Record type 40 contains daily nutrient intakes for each participant. There is one record type 40 for each wave of participation. Thus, each participant has between one and six record type 40's. Record type 45's contain average daily nutrient intakes for each participant, regardless of the number of waves completed. There is one record type 45 for each participant.

For record types 25, 30, 40, and 45, the household identification number is located in columns 2-6, the household grid number in columns 8-9, and the screener identification numbers in columns 33-34. The wave number is located in column 7 of record types 30 and 40.

FILE SEQUENCE

The datafile is in sequence by household identification number and by household grid number within the household. All data pertaining to one household and to one individual are together.

For example:

Household identification number	Household grid number	Wave number	Record type
10001	N/A	N/A	10
10001	N/A	N/A	15
10001	01	N/A	20
10001	01	N/A	25
10001	01	N/A	45
10001	01	1	30
10001	01	1	30
10001	01	1	30
.	.	.	.
.	.	.	.
.	.	.	.
10001	01	1	40
10001	01	2	30

Household identification number	Household grid number	Wave number	Record type
10001	01	2	30
.	.	.	.
.	.	.	.
.	.	.	.
10001	01	2	40
10001	01	4	30
.	.	.	.
.	.	.	.
.	.	.	.
10001	01	4	40
10001	02	N/A	20
10001	03	N/A	20
10001	03	N/A	25
10001	03	N/A	45

10001	03	1	30
10001	03	1	30
.	.	.	.
.	.	.	.
.	.	.	.
10001	03	6	40
10002	N/A	N/A	10

The records are sorted in the following order:

Household identification number	Columns 2-6
Household grid number	Columns 8-9
Wave number	Column 7 (record types 30 and 40 only)
Record type	Columns 10-11
AM/PM	Columns 74 (record type 30 only)
Time	Columns 70-73 (record type 30 only)
Line number	Columns 76-77 (record type 30 only).

KEY FIELDS

Frequently used information is repeated in many of the record types in key fields found in columns 1-37 of record types 10 and 15 and in columns 1-44 of record types 20, 25, 30, 40, and 45 with the exception of columns 29-34 in record type 45. Otherwise, the key fields are the same for all seven record types for columns 1-44 with the exception of columns 8 and 9.

Household income expressed as a percentage of poverty is also found in all record types:

Record type	Column numbers
10, 15, 20, 25	472-475
30, 40	64-67
45	40-43

The household sample weight factor, found in columns 33-37 of record types 10 and 15, may be used with variables that describe the household when the household is the unit of observation. The individual weight factors, found in columns 40-44 of record types 20, 25, 30, and 40, may be used with variables related to individuals when the individual is the unit of observation.

Persons With Zero Intakes

Participants who reported no food intake do not have record type 30's for the no-intake days. They do, however, have record type 40's for the no-intake days that are zero-filled, and the zeros were used in computing their record types 45 and 25.

Record Counts

Record type	Number	
	Core	Low-income
10	1,352	1,223
15	1,352	1,223
20	4,952	5,170
25	1,960	2,082

30	75	1		I.D. - Q.19 Name of eating occasion 1 - Breakfast 2 - Brunch 3 - Lunch 4 - Dinner 5 - Supper 6 - Snack/beverage break (party, happy hour) 0 - Something else 8 - Don't know/no answer 9 - Extended consumption over day period	

DATASET FORMAT

Description of Data Fields

Record type	Column	Length	Implied decimals	Variable description	Additional comments
30	76-77	2		I.I. - Food line item number 01-99	
30	78-84	7		I.I. - 7-digit USDA food code	
30	85-90	6	2	I.I. - Amount consumed 000001-999999 - grams	Blank if food code is 1100000 (human milk).
30	91	1		I.I. - Q.23A On this occasion, did you add salt or salt substitute to any item at the table? 1 - Yes 2 - No 8 - Don't know 9 - No answer	Same code is carried through every item of eating occasion.
30	92	1		I.I. - Q.23B Was salt or a salt substitute added to this food item? 1 - Salt added 2 - Salt substitute added 8 - Don't know 9 - No answer Blank - No salt or salt substitute added	Applicable only if code 1 in Q.23A, Column 91.

Description of Data Fields

Record type	Column	Length	Implied decimals	Variable description	Additional comments
30	93	1		I.I. - Q.24 Was this food from the home food supply? 1 - Eaten at your home 2 - Brought into your home, but later eaten away from home 3 - Never brought into your home	
30	94	1		I.I. - Q.25A Were any fats or oils used in preparing any of the items for this occasion before they were brought to the table? 1 - Yes 2 - No 8 - Don't know 9 - No answer	Applicable only if food item is that of the main meal preparer and only if Column 93 (source code) is a 1 or 2. The same code is carried through every item of the eating occasion.
30	95	1		I.I. - Q.25A Were fats or oils used in the preparation of this item? 1 - Fat used in preparation Blank - No fat used in preparation	Applicable only if food item is that of the main meal preparer and only if Column 93 (source code) is a 1 or 2. Column 94 must have a code 1.

DATASET FORMAT

Description of Data Fields

Record type	Column	Length	Implied decimals	Variable description	Additional comments
30	96-97	2		I.I. - Q.25C What type of fat or oil was used for this item? 1 - Olive oil 2 - Corn, cottonseed, safflower, or sunflower oil 3 - Soybean oil, other vegetable oil, or nut oil 4 - Regular tub or liquid margarine 5 - Regular stick margarine 6 - Any diet margarine 7 - Margarine blend 8 - Butter 9 - Animal shortening (meat drippings) 10 - Vegetable shortening 11 - Don't know/remember	Applicable only if food item is that of the main meal preparer and Column 93 is a 1 or 2 and Column 94 is a 1 and Column 95 is a 1.
30	98	1		I.I. - Q.26A Did you use salt/salt substitute in preparing any of these items? 1 - Yes 2 - No 8 - Don't know 9 - No answer	Applicable only if food item is that of the main meal preparer and Column 93 is a 1 or a 2. Same code is carried through every item of that eating occasion.

DATASET FORMAT

Description of Data Fields

Record type	Column	Length	Implied decimals	Variable description	Additional comments
30	99	1		I.I. - Q.26B Which foods did you use salt/salt substitutes on? 1 - Salt 2 - Salt substitute 8 - Don't know 9 - No answer	Applicable only if food item is that of the main meal preparer and Column 93 is a 1 or a 2 and Column 98 is a 1. Blank if the food item did not have salt added in preparation.
30	100	1		I.I. - Q.27A In what form was it when brought into your house? 1 - Commercially frozen 2 - Commercially canned or bottled 3 - Some other form 8 - Don't know 9 - No answer	Applicable only if food item is that of the main meal preparer and Column 93 is a 1 or 2.
30	101	1		I.I. - Q.27B What did the label of the food item say? 1 - No sodium/salt 2 - Low sodium/salt 3 - Neither 8 - Don't know 9 - No answer	Applicable only if food item is that of the main meal preparer and Column 93 is a 1 or 2 and Column 100 is a 1 or 2.

Description of Data Fields

Record type	Column	Length	Implied decimals	Variable Description	Additional comments
30	102	1		I.I. - Q.28 Location for obtaining food not from home supply 1 - Restaurant with waiter/waitress service at a table or counter 2 - Cafeteria or self service buffet restaurant 3 - Restaurant where food was ordered and picked up at a counter or drive up window (include fast food places) 4 - School 5 - Day care center or summer day camp 6 - Community feeding program (senior citizens, disabled, or needy person) 7 - Vending machine or street vendor 8 - At someone else's home 9 - Some other place 0 - No answer/don't know	Application only if Q.24, Col. 93 is a 3.
30	103	1		I.I. - Additional identification of food item 0 - Single item 1 - Part of sandwich 2 - Part of frozen meal 3 - Part of a salad 4 - Part of a mixture 5 - Part of a soup	

Description of Data Fields

Record type	Column	Length	Implied decimals	Variable description	Additional comments
30	104-105	2		I.I. - Military time Hour eating occasion began 00-23 99 - No answer	Created variable from columns 70-71 and 74.
30	106-107	2		Blank	
30	108	1		I.I. - Not specified quantity Blank - Quantity specified 1 - Quantity not specified	
30	109-112	4	2	Calcium conversion factor	
30	113-114	2		Fat in cooking 1 - Olive oil 2 - Corn, cottonseed, safflower, or sunflower oil 3 - Soybean oil, other vegetable oil, or nut oil 4 - Regular tub or liquid margarine 5 - Regular stick margarine 6 - Any diet margarine 7 - Margarine blend 8 - Butter 9 - Animal shortening (meat drippings) 10 - Vegetable shortening 11 - Don't know/Don't remember/Not applicable	
30	115	1		Salt in cooking 0 - Salt added/Don't know/Not applicable 1 - No salt added	

Record type	Column	Description of Data Fields: Length	Implied decimals	Variable description	Additional comments

Control Counts

This file contains counts of responses for variables found in the dataset. The file is ordered by record type. For categorical variables, such as race, the counts are the number of responses in each category. For the continuous variables, such as last year's income, the counts are the number of responses within a given range. Also given are the counts of "Don't know" and "No answer" responses. Both weighted and unweighted counts are given. Weights were calculated for each wave and applied to the data for that wave. This file is intended to be a point of reference for the user.

Distribution of Households in CSFII 1986, 6 Waves, Core Sample,
by Various Demographic Variables

RECORD TYPE 10: VARIABLE DESCRIPTIONS AND CODES	UNWEIGHTED COUNTS	WEIGHTED COUNTS
Total Number of Households (Wave 1)	1,352	1,351
C.21-25		
1985 Household Income Before Taxes(imputed if missing)		
$ 0 - 9,999	177	186
$10,000 - 19,999	284	281

51-CHARACTER FOOD DESCRIPTION FILE

This file contains the 7-digit food codes found in the Manual of Food Codes for Individual Intake (file no. 6) with an abbreviated (51 characters or less) version of the description for each code. This file does not contain all the information found in the descriptions in the manual. It is provided as a potential time-saving aid to the users of the dataset. For example, the 51-character description file can be linked to the data file when generating listings of individuals' food intakes or to other listings when exact identification of the food items is not necessary.

FOOD CODE	FOOD DESCRIPTION
1100000	MILK, HUMAN
1110000	MILK, NFS
1111100	MILK, COW'S, FLUID, WHOLE
1111110	MILK, COW'S, FLUID, WHOLE, LOW SODIUM
