

2015 Southeast Idaho Forage School

Preston, ID

March 3, 2015

Dr. Blair Waldron and Mr. Ronald Reed, FRR, attended the 2015 Southeast Idaho Forage School in Preston, Idaho on March 3, 2015. On behalf of the FRR, Dr. Waldron gave an invited presentation entitled, "Pasture Mixes that Produce Growth and Milk." The presentation was well received and elicited many questions. Of particular interest was management information on birdsfoot trefoil in a mix with grasses, and the economic data that showed net return (\$ per acre) on grazing grass-legume mixtures. There were 40 producers in attendance, and by show of hand, half of them indicated that the presentation had increased their interest and/or helped them in managing livestock production and grazing grasses and legumes.
