

Greeting AGMers,

Right now it looks like we'll finish out the month right around **0.34"** for June and **8.15"** year-to-date.

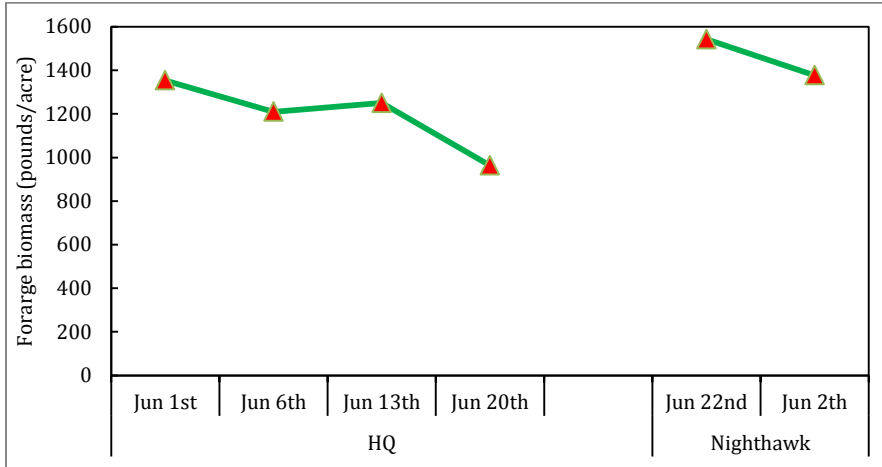

Highlights of Happenings:

- **In case you missed the CARM tour yesterday**, the Stakeholders & Scientists held a phenomenal event, what a turn out, I heard we ended up having 95 guests?! Of course, the center-pin to the whole thing was our very own **Hailey Wilmer, great job!** I hope this becomes an annual event (says the gal who just got to enjoy the ride).

- This week we had a group **gather, pull, and download GPS & Pedometer Collars**. Despite some technical difficulties, the crew pulled it off like rock stars.
- **VOR in the Nighthawk 5.87cm or 1377.1 pounds/acre**. Although we are no longer recording the phenological state of Needle & Thread, we still keep an eye out. This week we found grazed individuals where all they left was the flowering stalk. Interesting, even though they have plenty of other options out there, looks like they will still eat it this time of year.

Above: Compares a week's worth of grazing in Nighthawk. The steers have really grazed down the Stiff Greenthread (yellow flower in left photo).

"So I guess I'll do what the guvment says to do and stock the range to the max. And hope to hell I can write it off on my Income Tax!" – Jeff Thomas

For detailed precipitation data, maps, last year's updates, scientist bios, and AGM documents, see our website: [AGM](#) . Remember to send your questions, concerns, and ideas my way and I do my best to have them addressed in next week's email.

On behalf of the USDA-ARS-Rangeland Resources Research Unit, I thank you all for your continued participation in this project.
