Greetings CARMers!

We have cattle and got a little rain all is well on the range.

Let's Recap!

Elm Stats:
- Sandy Soils
- Cool Season Dominated
- Veg. Threshold 550lbs/acre
- Burned in 2018 (80 acres)
What's in our cup?

Elm looks like it is around that 10 - 15% soil moisture range.

The grass is currently out growing the grazing, between the available water & sun I'd say we have happy plant conditions.
Available Forage

1278 lbs/acre
5.46 cm

Cattle Receiving Week

We processed 1142 steers last week, simply put, 681,536 pounds weighed & allocated. Whew.

I need to give a huge shout out to all those who lent a hand. We can't change the work load, but those long days didn't seem so bad when surrounded by hard workers and great attitudes. Thank you.

The mobile scales are out to pasture, we're beginning the integration training as we speak. I'll have a diagram below to show you how the cattle train themselves to use the mobile systems on BaseCamp. Stay Tuned!

Let 'm stay

Pasture Day 6
Tech Note:
The burn is greening up nicely & the cattle are enjoying vegetation both on and off the burn.
Up Coming!

- Seasonal Technicians on full board
- Data Day - June 27th

On behalf of the USDA-ARS Rangeland Resources & Systems Research Unit, I thank you all for your continued participation in this project.

For detailed precipitation data, maps, last year’s updates, Scientist bios, and CARM documents, see our website: ALL access data!
