Greetings CARMers!

CARM moved to Headquarters.

Let's Recap!

The Stakeholders made management decisions on the fly last week.

Here's a brief recap of the modifications:
Original preference was to graze the last 3 pastures 10 days, max. However, with 30 days left in the growing season and only two pastures to go in the sequence, Stakeholders voted to graze 21 days in Headquarters, unless VOR or behavioral trigger reached, and finish out the last 10 days in Salt Flat.
What's in our cup?
Less than 10% Soil Moisture, in other words, not much in our cup.
Ridgeline Exit Forage

Forage (pounds per acre)

- Elm
- Snowlence
- South
- Crossroads
- Hilltank
- Nighthawk
- Ridgeline

Threshold: 441 lbs/acre
1.9 cm

2018 Exit Forage:

- Elm
- Snowlence
- South
- Crossroads
- Hilltank
- Nighthawk
- Ridgeline

Threshold: 737 lbs/acre
1.9 cm

NOTE: Empty (E) is set at 500 lbs/acre
Monthly Cattle Weights

The ADG decline follows the precipitation pattern closely.

Average Daily Gains

- Current Herd Average
  - Light: 861 pounds
  - Moderate: 808 pounds
  - Heavy: 815 pounds

Cowboy Report

Pasture Day 5

- Cattle grazing in smaller groups, spread out across pasture.
- No major items to report.
Tech Note:

- Nothing to note.
Up & Coming

- Residual measurements
- Fall Gather & Shipping
- CARM Outreach: WY Society of Range Management

Have you seen the CARM Fact Sheet?

On behalf of the USDA-ARS Rangeland Resources & Systems Research Unit, I thank you all for your continued participation in this project.

Happy Trails!
