# **PREGNANT COW and BULL SALE**

**Thursday - February 2, 2006  
12:00 noon**

at the  
**KEARNEY LIVESTOCK MARKET  
2020 Ave. F  
Kearney, Nebraska**

# General Information

The cattle offered for sale have completed their usefulness in the Center's research program. They were selected for this sale on the basis of performance and conformation criteria and are excess to our research needs.

All receipts from the sale of breeding and market animals are used to defray operating costs at the Roman L. Hruska U.S. Meat Animal Research Center.

The sale will start promptly at 12:00 noon, Thursday, February 2, 2006, at the Kearney Livestock Market at Kearney, Nebraska. Cattle will be on display beginning the afternoon of January 31, 2006, until sale time.

All bulls have weaning weights adjusted to 200 days of age, yearling weights are adjusted to 365 days of age, scrotal circumference is expressed in cm. while hip height is measured in inches. Age of dam adjustment factors for all breeds are the BIF additive factors.

The expected progeny differences (EPD) listed are predicted values based on performance of the animal's individual records as well as ancestral performance for each trait and are **derived from calculations made at the U.S. Meat Animal Research Center** and utilized in the experimentation here. Traits estimated are calving ease maternal, calving ease direct, birth weight, weaning weight, yearling weight and milk. Estimated breeding values (EBV) for twinning are described under Twinning in the next section.

Weights on the two-year old heifers were taken in early September of 2005. In past years the heifers have gained about 200 pounds per head between September and sale time. Weights and measurements were collected in later October on the mature cows and bulls.

Following is a brief history for each breed offered for sale.

**Angus:** Cattle are from the Calving Ease and MARC populations. The cow herd was developed from seed stock transferred from the University of Nebraska herd at Lincoln. Outcross bulls have been used since 1990. All cattle are purebred. All are two-year olds and were bred to Angus bulls selected for ease of calving.

**Composite:** MARC II is 1/4 Gelbvieh, 1/4 Simmental, 1/4 Hereford and 1/4 Angus. Cattle are from both the Calving Ease project and the MARC populations. Some of the cattle from the MARC populations are products of widening that genetic base and have small percentages of other breeds. The heifers were bred to MARC II bulls selected for ease of calving. The older cows were bred to Red Angus x Simmental bulls.

MARC III is 1/4 Red Poll, 1/4 Pinzgauer, 1/4 Hereford and 1/4 Angus. The heifers are from both the Calving Ease project and the MARC populations and were bred to MARC III bulls selected for ease of calving. All are first calf heifers.

**Crossbred:** 1. Red Angus x Simmental - These F1 and F2 cattle were produced by mating industry leading Red Angus bulls to purebred Simmental cows. They have been used various ways in our breeding programs. They are half British and half Continental. The two-year old heifers were bred to MARC II bulls selected for ease of calving. The mature cows were bred to Red Angus x Simmental bulls.

2. Crossbred - The crossbred two-year old heifers (lot 37) were sired by Red Angus-Simmental cross bulls and were out of MARC III dams. These heifers were bred to MARC II bulls selected for ease of calving. These calves should be very similar to those from the MARC II and Red Angus x Simmental cows. The older cows were bred to Red Angus x Simmental bulls.

**Twinning:** The Twinning Project was started in 1981 by selecting cattle based on their ability to produce twins, from breeds that have above average twinning frequency. Replacement cattle are selected on their predicted ability to increase twinning frequency. Specifically, bulls are produced by mating proven sires, (i.e., those having daughters with high ovulation rate and/or twinning frequency) with the top 20% of cows based on estimated breeding value (EBV) for twinning. Presently, twinning rate in the Twinning Project is about 50%. The average twinning rate among all breeds of cattle not selected for twinning is less than 2%. Cattle produced in this project are large frame, growthy and muscular with desirable beef characteristics. Maternal ability in this population is excellent. Carcass data from steers fed high energy density diets have shown high cutability with relatively high levels of marbling. Breeds represented in this population include: (1) Holstein, (2) Simmental, (3) Charolais, (4) Brown Swiss, (5) Pinzgauer, (6) Gelbvieh, (7) Swedish Friesian, (8) Norwegian Red, (9) Shorthorn, (10) Hereford and (11) Angus. An EBV for Twinning is listed for each Twinning Project animal being sold. It can be anticipated that of the Twinning bulls offered in this sale, when mated to cows with an average ability to produce twins (2.0%), these matings will produce daughters who should have twin births 30-35% of the time, i.e., Bull A  $EBV = 60 + 2$ , the EBV of non-twinning cows, will produce daughters with EBV for twinning of 31%,  $(60 + 2) / 2 = 31$ .

## How To Read The Information Printed In The Catalog

### EXPECTED PROGENY DIFFERENCE (EPD)

The predicted values based on performance of the animal's individual records as well as ancestral performance of each trait and are derived from calculations made at the U.S. Meat Animal Research Center and utilized in the Calving Ease Project.

CE EPD		Birth		Weaning			Milk	Yearling		
Mat.	Dir	Wt	EPD	Wt	Ratio	EPD	EPD	Wt	Ratio	EPD
-0.5	0.4	80	2	601	112	10.5	6.0	1002	109	11.0
		Actual Birth Weight		Weaning Weight Adjusted to 200 Days				Yearling Weight Adjusted to 365 Days		

### CALVING EASE EPD

A predictor of how it could change the calving difficulty score. A minus value would lower the score and a positive value would increase it.

**Maternal:** A predictor of the calving ease that an animal transmits to a daughter.

**Direct:** A predictor of the direct influence an animal has on calving ease of its progeny.

### Calving Ease EPD Description

Calving Ease EPD is expressed as a deviation from 0. Values below 0 indicate the probability of reduced calving difficulty while values above 0 are indicative of more calving difficulty.

### The calving difficulty scoring system used at MARC is:

- |   |  |                             |
|---|--|-----------------------------|
| 1 = No assistance                       | 4 = Average assistance with a calf puller  | 7 = Caesarean birth         |
| 2 = Assistance by hand                  | 5 = Moderate assistance with a calf puller | 8 = Abnormal presentation - |
| 3 = Light assistance with a calf puller | 6 = Major assistance with a calf puller    | (not in EPD computations)   |

### BIRTH WEIGHT EPD

A predictor of an animal's ability to transmit birth weight to its progeny.

### WEANING EPD

A predictor of an animal's ability to transmit weaning growth to its progeny.

### YEARLING EPD

A predictor of an animal's ability to transmit yearling growth to its progeny.

### MILK EPD

A predictor of an animal's genetic merit for milk and mothering ability as expressed in its daughters, or in other words, that part of weaning weight attributed to milk and mothering ability.

	Weaning		Yearling	
	Prog	Ratio	Prog	Ratio
<b>Individual</b>	2	97	1	97
<b>Sire 896029</b>	40	99	19	99
<b>Dam 906023</b>	2	104	2	105

**Prog** denotes progeny. **Individual** information is the number of progeny a bull or cow has, and the average weaning or yearling weight ratio of their progeny. The same information is listed for the sire and dam of the individual of that given lot.
