

Cell line designation: IPLB-Tcon

Tissue source: *Trichogramma confusum*
embryos

Date initiated: February 1986

Morphology: small spindle-shaped cells

Karyology: mode=18 (n=6)

Culture medium: ExCell 420 (SAFC Biosciences
(formerly JRH Biosciences), Lenexa, KS)

Subculture procedure: Cells are suspended by
repeated flushing with media from a pipet and split 1:15 to 1:20 at 1 week intervals.

Reference: Lynn, D. E. and A. C. F. Hung (1991) **Arch. Insect Biochem. Physiol.** 18:99-104.

*Distribution of cell lines from the Insect Biocontrol Laboratory requires a letter on the recipient's letterhead agreeing that: (1) they will not be distributed to anyone outside your facility (2) they are for research purposes only, any commercial use must be agreed to in writing by the **Agricultural Research Service** and (3) publications describing research performed with the cells cites the appropriate reference and gives appropriate credit to the **Agricultural Research Service**.*
