Creating Leaders and Inclusion in Molecular Biology May 20th-June 28th 2019

The CLIMB Summer Research Program in the Van Hoewyk lab at Coastal Carolina University seeks to develop tomorrow’s leaders in cell and molecular biology. This NSF-funded program aims to create research opportunities for undergraduates who have a disability. A stipend, airfare, and housing are provided.

Science is driven by good ideas, and diverse groups broaden the “idea pool.” People with both visual and nonvisual disabilities are underrepresented in the scientific community, and CLIMB will provide accommodations and support for all undergraduate students.

To apply: qualified students should submit a resume, unofficial transcript, cover letter that describes your career goals, and the contact information of three professors/employers who can serve as a reference. Please submit material via email to dougvh@coastal.edu by April 8th. All applicants are encouraged to email or call Doug Van Hoewyk (843 349 2431) to discuss CLIMB or possible projects.
