The Genetic Stocks Oryza (GSOR) Collection has world-wide impact for over a decade. The mission of the GSOR is to acquire, maintain, and distribute available genetic seed stocks to enhance rice research. Since distribution began in 2004, over 40,000 rice accessions have been sent to researchers in the U.S. and 26 countries on 6 continents.

Contact Dr. Anna McClung (anna.mcclung@ars.usda.gov) or Lorie Bernhardt (lorie.bernhardt@ars.usda.gov) with the Dale Bumpers National Rice Research Center for additional information.

Research results that included GSOR rice genetic stocks have been published in many journal articles. A few examples are listed below.
