

InvictDetect™

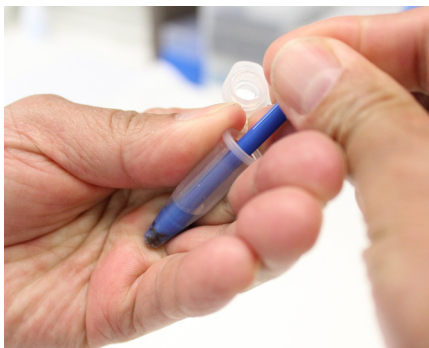

Rapid Identification Kit for
Red Imported Fire Ant

On-Site Identification of RIFA in Minutes.

InvictDetect is a field-deployable diagnostic kit that allows simple and fast identification of *Solenopsis invicta*, commonly known as the red imported fire ant (RIFA). RIFA is responsible for billions of dollars of damage, annually, to the agricultural industry. More importantly, it poses a safety risk to human and animal health. InvictDetect takes the guesswork out of identification because it is 100% specific to the *sol2* protein found in RIFA venom. The protocol is simple to follow and provides the user with results in only 10 minutes.

Easy to use. Clear Results.

Extract 3 to 5 worker ants with included extraction materials

Insert InvictDetect ImmunoStrip for 10 minutes

Read Results

InvictDetect can be used by:

- Field inspectors
- State Departments of Agriculture
- Nurseries
- Homeowners

Ordering Information

InvictDetect kits include everything necessary to perform the assay* and are guaranteed for one year from purchase date.

Product Number: ISK 49700/0010

Contains: 10 tests

Price: \$240.00

*Tools for collecting ant specimens are not included. When collecting ants for testing, use extreme caution. *Solenopsis invicta* stings can cause local and systemic allergic reactions.
