Loc 63: Dr. M. D. Burow
Dept. of Soil & Plant Sciences
TAES Texas A&M University
Rt. 3, Box 219
Lubbock, TX 79401

Loc 70: Dr. K. E. Dashiell
Oklahoma State University
Dept. of Plant & Soil Sciences
276 Ag Hall
Stillwater, OK 74078-6028

Introduction

The establishment, purpose, and description of the of the Uniform Peanut Performance Tests are summarized in the following:

The Uniform Peanut Performance Tests (UPPT) were established in 1973 through an informal arrangement among cooperating scientists involving seven major peanut-producing states. In 1995, plant material transfer agreements were also accepted among all cooperators in the UPPT.

The purpose of these tests is to evaluate the commercial potential of advanced peanut breeding lines not formally released. The UPPT continues to serve as a valuable testing arrangement for U. S. peanut breeding programs to measure the adaptability of potential new cultivars over a wide range of diverse environments.

Annually, a uniform set of advanced breeding lines has been chosen and tested against the same set of check cultivars. Before acceptance for UPPT evaluation, new entries should be equal to the appropriate check cultivar of similar market type in several respects and be superior in one or more characteristics after preliminary yield testing for at least two years. These new entries are usually accepted for a maximum time period of three years in the UPPT, unless prior arrangement has been made with the coordinator. At each participating location, the UPPT cooperator commonly uses the most prevalent cultural practices, and may also include additional entries (local options).¹

To assist the UPPT, the USDA, ARS, National Peanut Research Laboratory (NPRL) has established a program to assist cultivar quality assessment for participating scientists and the US peanut industry. A shelling and physical property laboratory has been established and is being used to provide information relevant to industry shelling and post harvest processing. For the 2001 crop, further quality evaluations will begin that will include collaborative food parameter evaluations with the USDA, ARS, Market Quality and Evaluation Unit in Raleigh, NC.

Protocol for NPRL Shelling and Processing Samples

1. When received, peanuts in samples are weighed and then stored in a room at ambient temperature with relative humidity controlled at ~ 60%.
2. If an official grade is requested, a 1500-2000 gram subsample is obtained through riffle dividing the sample and FSIS grading procedures are conducted with the subsample.

¹Dr. Wm. D. Branch. Uniform Peanut Performance Tests. April, 2000. UGA/CPES Research Progress Report No. 4-00. Dept. of Education, Communication, and Technology, UGA, Rural Development Center, Tifton, GA.

3. In initiating evaluation procedures besides grading, peanuts from samples are stemmed and cleaned if needed.
4. Inshell bulk density of peanuts in each sample is determined by measuring weight and volume of each sample (weight/volume).
5. Next, samples are riffle divided to obtain a subsample (~1500 grams) of pods for pod diameter distribution determination. Pods by cultivar type are screened with the following slotted screens (Table 1):

runner and spanish cultivars: 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27p, 28p, 29p, 30p, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40;

virginia cultivars: 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27p, 28p, 29p, 30p, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 44, 46, 48.
6. After pod sizing, ~ 200 grams of the largest pods from the pod sizing subsample are hand shelled and kernels are sized to determine first stage shelling grate size, i.e., largest kernel size diameter plus 2/64 ths inch. All shelling grate openings used are 1 1/4" in length.
7. All pods not hand shelled in 6. above are sized with an appropriate Federal State Inspection Service (FSIS) roller sizer, i.e., runner, spanish, or virginia.
8. Larger pods separated by the FSIS sizer are shelled² with a grate size determined in 5. above. Pods not shelled are hand separated and shelled with a grate size 2/64" in diameter smaller. Hand separation of pods from kernels and subsequent shelling with a 2/64" smaller diameter grate size is repeated through 26/64" for runner and spanish and 34/64" for virginia. Unshelled pods at this point are added to the mid sized pods from the roller sizer.
9. Mid size pods from the roller sizer for runner and spanish are shelled with a 23/64" diameter grate size. Unshelled pods are hand separated and added to the smaller pods from the roller sizer.
10. Mid size pods from the roller sizer for virginia are shelled with a 30/64" diameter grate size. Unshelled pods are hand separated and added to the smaller pods from the roller sizer.
11. The smallest size runner and spanish pods from the roller sizer are shelled with a 20/64" diameter grate size. Unshelled pods subsequently hand separated and shelled with a 16/64" diameter grate size if needed. All remaining pods are then hand shelled.

²Shelling done with a sheller developed at NPRL. Davidson, J.I., Jr., R.F. Hudgins, and C.T. Bennett. 1981. Some design and performance characteristics of a small peanut cleaner. *Oleagineux*, 36:433-435.

12. The smallest size virginia pods from the roller sizer are shelled with a 26/64" diameter grate size. Unshelled pods subsequently hand separated and shelled with a 23/64" diameter grate size followed by a 19/64" diameter if needed. All remaining pods are then hand shelled.
13. Vibrating screens on the sheller during all shelling are used to make course separations of kernels to facilitate hand sizing of kernels which follows shelling. Sizes used for the vibrating screens to provide the separations include:
 - Top deck: 17/64" Round, 16/64" x 1-1/4", 26/64" x 3/4"
 - Bottom deck: 18/64" x 1-1/4", 21/64" x 1-1/4".
14. After shelling, small kernels, small splits, and oil stock are separated from split kernels by hand screening and picking.
- 15 Separations of kernels obtained thus far are temporarily stored in plastic zip-loc bags until hand screening can be conducted for determination of kernel size distributions and subsequent calculation of commercial grade sizes.
16. Next, kernels are hand sized by diameter utilizing slotted screens (Table 1) by 1/64" diameter divisions and then partitioned into commercial grade categories³ by peanut type as follows:
 - runner (screens 12 through 30, Table 1):
 - Jumbo: +21;
 - Medium: + 18, - 21;
 - Number ones: +16, - 18;
 - Oil stock: - 16 plus splits through a 17/64" round hole screen;
 - Splits: kernels less than 3/4 whole that ride a 17/64" round screen.
 - spanish (screens 12 through 30, Table 1):
 - Jumbo: + 19;
 - Number ones: +15, - 19/64ths inch;
 - Oil stock: - 15 plus splits through a 16/64" round hole screen;
 - Splits: kernels less than 3/4 whole that ride a 16/64" round hole screen.
 - virginia: (screens 12 through 36, Table 1):
 - Extra large kernels: + 20;
 - Medium: +18, - 20
 - Number ones: + 15, - 18
 - Oil stock: - 15 plus splits through a 20/64ths round hole screen;
 - Splits: kernels less than 3/4 whole that ride a 20/64ths round screen.
17. Moisture contents are determined on samples of commercial grade categories with a Dickey-John GAC 2000 moisture meter.

³American Peanut Shellers Association. 2000 . Official Trade Rules: Farmers Stock, Shelled, In-Shell.

18. Count/lb for commercial grade categories are determined with weighed, 160 kernel subsample if available (not run if less than 20 kernels available).
19. Single kernel moisture distributions of the commercial grade categories are also estimated with the subsamples from 16 above with a Shizuoka Seiki CTR-160P single kernel moisture meter (not run if less than 20 kernels available).
20. The shelled samples which are divided into commercial grade categories are placed in refrigerated storage or returned to the ambient storage prior to being shipped or destroyed as instructed by the sample supplier.
21. Data collected during the shelling analysis are summarized utilizing Corel Quattro Pro 8.

Table 1. Screen opening designations, slot widths, and slot lengths for screens used in pod and kernel sizing.
