INTRODUCTION (File 1)

This dataset provides 4-day dietary intakes by women 19 to 50 years of age of all incomes and their children 1 to 5 years of age surveyed between April 1985 and March 1986. The data were collected using 1-day dietary recalls as part of the 1985 Continuing Survey of Food Intakes by Individuals (CSFII 1985) conducted by the U.S. Department of Agriculture (USDA).

Individuals contacted as part of the CSFII 1985 were asked to provide 6 days of dietary data over a 1-year period. Each day of data was collected at approximately 2-month intervals. The first day of data was collected using a personal interview; subsequent days of data were collected by telephone. Not all of the women and children who agreed to participate and who provided the first 1-day recall completed all 6 days. Of the women who completed the first 1-day dietary recall, 71 percent completed at least 4 days, 63 percent completed at least 5 days, and 47 percent completed all 6 days. This dataset provides data on the dietary intakes by women and children who completed the first 1-day recall and at least 3 additional 1-day recalls.

The CSFII was initiated in 1985 to provide timely information on the adequacy of diets of selected population groups and to provide early indications of dietary changes. Data from the CSFII allow policymakers to formulate research-based policies for nutrition and food intervention programs, consumer education, food fortification, and regulatory activities.

The CSFII complements the larger nationwide food consumption surveys conducted by USDA approximately every 10 years. The surveys in 1936-37, 1942, 1948 (urban only), and 1955 collected information on food consumption at the household level. An individual intake component was added to the spring quarter of the 1965-66 survey, and the Nationwide Food Consumption Survey 1977-78 (NFCS 1977-78) included individual intakes throughout the entire year.

The CSFII is a major component of the National Nutrition Monitoring System (NNMS), a set of related Federal activities intended to provide regular information on the nutritional status of the U.S. population (1). The Food and Agriculture Act of 1977 (P.L. 95-113, Title XIV) called for new initiatives in research on human nutrition and food consumption patterns and directed USDA and the Department of Health and Human Services (DHHS) to develop the NNMS. The CSFII was designed to be responsive both to this Legislation and to recommendations made in reports of recent studies pertaining to food consumption research (2, 3). A number of organizations commented on or contributed to the development of the CSFII questionnaire. These include the National Center for Health Statistics and the Food and Drug Administration of DHHS, the Environmental Protection Agency, the Economic Research Service of the USDA, the House Agriculture Committee, the House Committee on Science and Technology, and several universities and food advocacy groups.

National Analysts (a division of Booz, Allen and Hamilton, Inc.), a private firm in Philadelphia, Pennsylvania, conducted the CSFII 1985 under contract with the Human Nutrition Information Service (HNIS), USDA. National Analysts designed the sample; collected the information; edited, coded, and keyed the data; and prepared the final data tape. HNIS defined the information to be collected; provided technical information such as food codes, gram weights of household measures of food, and the nutrient composition of foods; and monitored all aspects of the contract.

METHODOLOGY

Sample Design

The CSFII 1985 sample was drawn from all private households in the conterminous United States. The survey was designed to provide a multistage stratified area probability sample representative of the 48 conterminous States. The stratification plan was organized using estimates of the U.S. population in 1985. The stratification plan took into account geographic location, degree of urbanization, and socioeconomic considerations. Each successive sampling stage selected increasingly smaller, more specific locations.

The 48 States were grouped into the 9 census geographic divisions; then all land areas within the divisions were divided into 3 urbanization classifications: central city, suburban, and nonmetropolitan (see Glossary). The stratification process resulted in a total of 60 strata--17 central-city, 28 suburban, and 15 nonmetropolitan--which correspond to the geographic distribution, urbanization, and density of the population within the conterminous United States as reported by the Bureau of the Census. The distribution of these strata is shown below:

Census region and division	Central city	Suburban	Nonmetro- politan
-------------------------------	-----------------	----------	----------------------

	-----number of strata-----		
Northeast:			
New England.....	1	1	1
Middle Atlantic.....	3	5	1
Midwest:			
East North Central..	3	6	2
West North Central..	1	1	2
South:			
South Atlantic.....	2	5	3
East South Central..	1	1	2
West South Central..	2	3	2
West:			
Mountain.....	1	1	1
Pacific.....	3	5	1
Total.....	17	28	15

Counties, cities, or parts of cities within each stratum were grouped together into smaller, relatively homogeneous units, called primary sampling units (PSU), based on political, economic, and demographic characteristics and/or geographical proximity. Each selected PSU was divided geographically along census boundaries into smaller clusters, known as area segments, containing a minimum of 100 housing units. A total of 206 area segments were drawn into the sample. Each area segment was selected with a probability proportional to the ratio of the number of housing units in the area segment to the total number of housing units in the PSU.

The 206 area segments were prelisted to identify the existing housing units within the area boundaries at the time of the survey. The prelisted number of housing units in the area, together with census information, served as the basis for determining the number of housing units to be selected for the sample from that area. Approximately 6,612 sample housing units were identified. Of these, 601 were not occupied at the time of field contact.

Data Collection

To contact individuals in housing units selected as part of the sample, trained interviewers made a minimum of three personal visits plus up to eight telephone calls to each household having a telephone. Households without telephones received a minimum of six personal visits (five in rural areas). At each household, the interviewer conducted a screening interview to determine if the household was eligible to participate in the survey.

Eligible households were those containing at least one woman 19 to 50 years of age at the time of initial contact. In eligible households, all women within this age range and their children 1 to 5 years, if any, were invited to be interviewed and to participate in the yearlong survey panel. A letter of introduction was provided, and respondents were informed that the full survey involved the collection of 6 days (waves) of intake data--each day at approximately 2-month intervals.

In each wave, the interviewing process included two major steps: (1) collection of information about the household and (2) collection of information on food intake. Separate intake records were used for each woman and for each child.

Interviewers were instructed to complete all interviews in a single household during the same visit or call, to complete the household schedule first and then the required intake records, and to obtain intake data about a woman and her children for the same 24-hour period. Interviewers were provided with instructions on what to do if deviation from this pattern was necessary.

Multiple contacts were made when needed to complete interviews in eligible households. Interviewing of a household was not considered complete until the household schedule and intake records for all eligible individuals who agreed to participate were obtained.

The first wave of data (wave 1) was collected by personal interview; subsequent waves of data were collected by telephone, if possible. Of the 1,221 households that provided information in both wave 1 and wave 2, 91 percent were interviewed by

telephone in wave 2. In households without telephones or where the respondent requested to be interviewed in person, the data for waves 2-6 were collected in a personal interview.

Only households that contained a member who was interviewed in wave 1 were recontacted in subsequent waves. Within these households, only women and children who completed interviews in wave 1 were eligible for reinterview in waves 2-6. Respondents who completed wave 1 were retained in the survey even if they missed one or more days in waves 2-6.

Information on the characteristics of the household was collected from the primary age-eligible woman in the household (the household informant). The female head of the household was always the household informant if she was age-eligible. In households where the female head was not age-eligible or where she did not take part in the survey, interviewers collected data on household characteristics from the age-eligible woman who was the main meal planner/preparer or the age-eligible woman who could best answer questions about the household. Household characteristics included the previous year's household income before taxes; participation in food programs; age, education, occupation, and employment status of the male head of household; household size; tenancy; usual amount of money spent on food; and each household member's sex, age, and relationship to the female head of the household.

Each woman interviewed provided information on her own food intake as well as that of her children 1 to 5 years of age. Information was collected on all food eaten either at home or away, the time of day food was eaten, what the eating occasion was called, and the use of salt at the table. The main meal planner/preparer was asked about the use of fat (including type) and salt in food preparation and about the form in which the food was brought into the home (commercially frozen, canned, or bottled or in another form). Foods were designated as coming from the home food supply or as obtained and eaten away from home (see Glossary). A Food Instruction Booklet, developed by National Analysts, was used by the interviewers to help respondents adequately describe foods and amounts eaten. The interviewers used standard household measuring cups and spoons and a ruler during the interview to help respondents estimate quantities of foods and beverages consumed. Respondents kept the cups, spoons, and ruler for use during subsequent interviews.

Each woman interviewed also provided information on her age, race, physiological status (pregnancy and lactation), employment, occupation, education, use of special diets, and use of vitamin and mineral supplements. Information on children's special diets and use of supplements was provided by their mother/ caretaker. Children were assigned the race of their mother/caretaker.

In waves 2-6, interviewers were instructed to attempt a reinterview within 7-10 days of two month's time from the date of the last interview. At each interview, the interviewer first obtained updated information on the household from the woman who provided the household information in wave 1. This included information on changes in household membership since the last interview, usual amount of money spent on food, program participation, and changes in household income.

In wave 1, eligible households were scheduled for interview in a manner designed to provide representativeness of intake data by day of the week over all households. In subsequent waves, interviewers were instructed to collect data for a household on different days of the week. For example, if the data for a household were collected for a Tuesday in wave 1 and for a Friday in wave 2, the household was asked to provide data for one of the other five days in wave 3.

In Wave 1, 1,341 households participated and provided useful data. A total of 1,503 women and 550 children satisfactorily completed the first CSFII 1985 food intake interview. Not all of these individuals completed all six waves as shown below:

Wave	Individuals completing	
	Women	Children
	-----number*-----	
1	1,459	489
2	1,221	383
3	1,042	304
4	995	280
5	910	246
6	902	255

* unweighted

Sample Weights

The sample was designed to be self-weighting. That is, strata, PSU, area segments, and housing units were selected to be representative of the population. Thus, the number of eligible households in each cell in the sample was designed to represent the same proportion as the respective number of households in each cell in the population. However, adjustments to the sample were required because not all eligible households agreed to participate, not all eligible women and children in eligible households agreed to participate, not all interviews yielded complete dietary information, and not all participants in wave 1 completed each subsequent wave. Weighting factors were applied to data from completed intake records to adjust for these sources of nonresponse. Weighting procedures involved the following steps:

(1) Subsample selection--This data tape provides data on the dietary intakes by women and children who completed the first 1-day recall and at least 3 additional days. For women and children who provided more than 4 days of dietary data, a computer program was developed to randomly select the 3 additional days to be used. The selection process for women was separate from that for children. Therefore, some of the dietary data for women and children from the same household may be for different waves. After the subsample and days of intake were selected, household and individual weights were calculated.

(2) Household weights--In wave 1, household weights were determined by dividing the actual number of interviewed households in the segment by the expected number of eligible occupied households in the segment. For the 4-day sample, the household weights for each area segment were adjusted to make that area segment account for the same proportion of households as it had in wave 1. If, after the 4-day respondents had been selected, an area segment had no respondents in a defined age group (see table below), that area segment was combined with the nearest segment in that region of the same urbanization type. The weighting calculations were then based on the combined area segment.

For both the wave 1 and the 4-day samples, household weights were developed so that the weighted number of households would equal the unweighted number of households, except for rounding differences.

(3) Initial individual weights--The development of individual weights was a two-step process. Separate initial weights were required for children and for women. The adjustment for eligible children for whom complete dietary intake information was not collected was made on an age basis within each area segment. All eligible children in participating area segments were divided into two age groups: those 2-1/2 years and under and those over 2-1/2 years. Children in each age group were listed by area segment. If complete dietary intake data were provided for all eligible children within an area segment, each child was given an initial weighting factor of 1.00. In area segments having children with missing dietary data, participating children received initial weighting factors that summed to the number of eligible children within the same age group in that segment. This was done by dividing the number of eligible children by the number of participating children. For example, if dietary data were missing or incomplete for one of five eligible children in the same area segment and age group, the other four children for whom intake data were obtained were assigned an initial weighting factor of 1.25.

1 The adjustment for eligible women for whom complete dietary intake information was not collected was made within a sample household. First, the number of age-eligible women and the number of participating women in each household were determined. Second, in households where all eligible women participated, each woman was given an initial weighting factor of 1.00. In households where not all of the age-eligible women participated, the women in that particular household who did participate received weighting factors that summed to the number of eligible women in that household.

(4) Final individual weights--The initial weighting factor for each child or woman was then multiplied by the household weight to obtain the final individual weight.

The unweighted and weighted counts of households and individuals who provided 4 days of dietary data by sample weighting groups are shown below:

	Unweighted count	Weighted count
Households.....	982	982

Children:		
2-1/2 years or under....	87	105
Over 2-1/2 years.....	215	267
Women:		
19-50 years.....	1,032	1,088

Data Processing

FOOD CODING--Completed schedules were coded by the contractor using food codes, gram weight conversions, and coding guidelines provided by HNIS (see Manual of Food Codes for Individual Intakes, File/Chapter No. 6). Each food and beverage reported as ingested during the 24-hour survey period was assigned a code number, and amounts of foods ingested were converted to their weight in grams. Items that could not be coded by the contractor using available information were referred to HNIS for resolution. New codes were created by HNIS as needed.

The food coding system used for the NFCS 1977-78 was revised for the CSFII 1985. The revisions to the coding system generally fall into the following categories:

- (1) Addition of new products and elimination of products no longer marketed.
- (2) Elimination of products reported infrequently in the 1977-78 survey.
- (3) Addition of new codes to provide more detailed specifications.
- (4) Deletion of product distinctions where the level of detail was more than the respondent might reasonably be expected to know, such as whether breads were made with enriched flour.
- (5) Combination under a single food code of items that were previously coded separately, such as several varieties of fish having very similar nutrient composition values.
- (6) Separation of certain foods coded as mixtures in 1977-78, such as coffee with cream, into their component parts.
- (7) Modification of food code descriptions to clarify the contents of mixtures, such as whether the mixture contained a vegetable high in vitamin A and whether a sauce was part of the mixture.
- (8) Separation into multiple codes of some similar foods coded together in 1977-78, such as low-sodium and regular products.
- (9) Refinement of recipes used for coding food mixtures. For example, many recipes containing butter in 1977 were changed to contain margarine in 1985.
- (10) Implementation of a system in 1985 to accommodate responses to the new questions asked of the main meal planner/preparer on use of salt and fat in food preparation. A response that salt or fat was added to an item in cooking was translated into an assumed amount of salt or fat added to the recipe and was coded accordingly. Fat was coded by type. (These codes were used only for the individual providing the information, not for other household members.)
- (11) Revision of gram equivalents, used to translate household measures of food intake into grams, because of improved data.

NUTRIENT DATA BASE--The amount of each nutrient in each food eaten was calculated using the weight (in grams) of that food and the nutritive value of that food (per 100 grams) from a nutrient data base (see USDA Nutrient Data Base for Individual Intake Surveys, File No. 7). The intake records and the nutrient data base were linked by the food codes. Amounts of each nutrient in all foods reported by an individual were summed to obtain the nutrient intake for the day.

The nutrient data base used to calculate nutrient intakes was developed by HNIS for use in this survey. The data base contains representative nutrient values for 100 grams of the edible portion of approximately 4,600 food items. The values for most items containing two or more ingredients were calculated from the data for the ingredients using representative recipes.

The nutrient data base includes values for food energy and 29 nutrients and other dietary components, as well as a calcium conversion factor (see Glossary). Fourteen of the nutrients included were available in the data base for the NFCS 1977-78:

protein, total fat, carbohydrate, vitamin A (as international units), ascorbic acid, thiamin, riboflavin, niacin, vitamin B-6, vitamin B-12, calcium, phosphorus, magnesium, and iron. Additional nutrients and dietary components included for the first time in 1985 are saturated fat, monounsaturated fat, polyunsaturated fat, cholesterol, dietary fiber, vitamin A (as retinol equivalents), alcohol, carotenes, vitamin E, folacin, zinc, copper, sodium, potassium, and moisture (water).

The values for food energy, nutrients, and other dietary components came from the USDA Nutrient Data Base for Standard Reference (4) and the USDA Nutrient Data Bank (5). Most of the values are supported by laboratory analyses. Nutrient values not available from laboratory analysis were imputed from data for other forms of the food or from data for similar foods. Most of the components have a relatively strong research base. Data for some components, however, are less well founded.

Values for the beta-carotene content of foods have not been reported frequently, and existing reports are often not clear as to whether a value is only for beta-carotene or whether it includes other carotenoids. Values in the data base for carotene are those assumed by HNIS in arriving at the values for total vitamin A and should not be interpreted as representing solely beta-carotene. Only limited data are available for vitamin E and dietary fiber. Data for vitamin E (as alpha-tocopherol equivalents) are available mainly for basic staple or commodity food items. Values for dietary fiber generally represent either total dietary fiber by direct determination or the sum of insoluble fiber and soluble fiber in foods for which data exist.

Nutrient intakes in 1985, compared with those of NFCS 1977-78, reflect data on improved quality, as well as changes in nutrient content of foods attributable to new varieties and species and to new enrichment and fortification levels. Major changes between 1977-78 and 1985 are as follows:

- (1) The data base for magnesium and vitamins B-6 and B-12 is more reliable; values for many of the foods for which data existed before are now based on more analyses, and many additional foods are now covered. This improved data base may contribute to either apparent increases or apparent decreases in amounts of these nutrients in foods.
- (2) Calcium values are higher in some breakfast cereals because more calcium has been added.
- (3) Phosphorus values for some foods are higher because of added phosphorus compounds. For example, bacon now has phosphate added to reduce shrinkage during cooking. Phosphorus in several breakfast cereals increased as more calcium was added in the form of calcium phosphate.
- (4) Iron values are higher for white flour, white bread, and other products made with white flour because of a change in enrichment standards. Iron values in the data base for meat and for milk-based infant formulas are lower because of new and improved data. Iron values for dried fruit are lower partly because of better data and partly because of the higher moisture content of the dried fruit.
- (5) Vitamin A values are higher for carrots, sweetpotatoes, and other deep-yellow vegetables because of the development of new varieties that are more intense in color and have a higher content of vitamin A. Values in the data base for fruits are lower because of improved data.

DATA CLEANING--Data were subjected to computer-assisted cleaning and checking by the contractor. Dietary intake records that were known to be incomplete were examined. Individuals' heights and weights were compared with the 2nd and 98th percentiles of individuals of the same age group and sex in the NFCS 1977-78 as a check for reasonableness. The gram weight of each individual's total intake of food and intakes of food energy, protein, fat, carbohydrate, calcium, iron, and ascorbic acid were checked for reasonableness in a similar manner. Also, the gram weight of each food reported was checked against reasonable maximums established by HNIS on a food group basis. Data that fell outside the limits set as reasonable were verified by checking the original questionnaire and were corrected if in error.

DERIVATION OF CALCULATED VARIABLES

Calculated by Human Nutrition Information Service (Sections 1-14 below)

1. Household income as a percent of poverty (7)

$$\% \text{ Poverty} = \frac{1984 \text{ household income} \times 100}{((N-1) 1800) + 5250}$$

where N = household size, found on RT 10, Col 40-41
1984 household income is found on RT 10, Col 21-25

Value is expressed as a whole number with decimal places dropped,
not rounded. The expected range of nonmissing values for this
variables is 0-1905.

2. Usual Amount of Money Spent Per Week on Food Brought Into the Home (By
Wave)

For Wave 1:

If household questionnaire questions 29 and 30 were answered on a per
week basis (i.e., if RT 10 Col 157 = 1 and RT 10 Col 162 = 1), then:

Usual amt. spent = (RT 10 Col 153-156) - (RT 10 Col 158-161)
on food at home

If household questionnaire questions 29 and 30 were answered on a per
month basis (i.e., if RT 10 Col 157 = 2 and RT 10 Col 162 = 2), then:

Usual amt. spent (RT 10 Col 153-156) - (RT 10 Col 158-161)
= -----
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis
and question 30 was answered on a per month basis (i.e., if RT 10 Col 157
= 1 and RT 10 Col 162 = 2), then:

Usual amt. spent (RT 10 Col 158-161)
= (RT 10 Col 153-156) - -----
on food at home 4.3

If household questionnaire question 29 was answered on a per month basis
and question 30 was answered on a per week basis (i.e., if RT 10 Col 157
= 2 and RT 10 Col 162 = 1), then:

Usual amt. spent (RT 10 Col 153-156)
= ----- - (RT 10 Col 158-161)
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis
and question 30 was responded to with "none" (i.e., if RT 10 Col 157 = 1
and RT 10 Col 162 = 0), then:

Usual amt. spent on food at home = (RT 10 Col 153-156)

If household questionnaire question 29 was answered on a per month basis
and question 30 was responded to with "none" (i.e., if RT 10 Col 157 = 2
and RT 10 Col 162 = 0), then:

Usual amt. spent on food at home = (RT 10 Col 153-156)
= -----
4.3

If response to household questionnaire question 29 or question 30 is
"don't know" (i.e., if RT 10 Col 157 = 8 or if RT 10 Col 162 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no
answer" (i.e., if RT 10 Col 157 = 9 or if RT 10 Col 162 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The
expected range of nonmissing values for this variable is 0-9997.

For Wave 2:

If household questionnaire questions 29 and 30 were answered on a per
week basis (i.e., if RT 15 Col 73 = 1 and RT 15 Col 78 = 1), then:

Usual amt. spent = (RT 15 Col 69-72) - (RT 15 Col 74-77)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 73 = 2 and RT 15 Col 78 = 2), then:

$$\begin{array}{l} \text{Usual amt. spent} \quad (\text{RT 15 Col 69-72}) - (\text{RT 15 Col 74-77}) \\ \text{on food at home} \quad = \frac{\text{-----}}{\quad 4.3} \end{array}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 73 = 1 and RT 15 Col 78 = 2), then:

$$\begin{array}{l} \text{Usual amt. spent} \quad (\text{RT 15 Col 74-77}) \\ \text{on food at home} \quad = (\text{RT 15 Col 69-72}) - \frac{\text{-----}}{\quad 4.3} \end{array}$$

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 73 = 2 and RT 15 Col 78 = 1), then:

$$\begin{array}{l} \text{Usual amt. spent} \quad (\text{RT 15 Col 69-72}) \\ \text{on food at home} \quad = \frac{\text{-----}}{\quad 4.3} - (\text{RT Col 74-77}) \end{array}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT 15 Col 73 = 1 and RT 15 Col 78 = 0), then:

$$\text{Usual amt. spent on food at home} = (\text{RT 15 Col 69-72})$$

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 73 = 2 and RT 15 Col 78 = 0), then:

$$\begin{array}{l} \text{Usual amt. spent on food at home} = \frac{(\text{RT 15 Col 69-72})}{\quad 4.3} \end{array}$$

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 73 = 8 or if RT 10 Col 78 = 8), then:

$$\text{Usual amt. spent on food at home} = 9998$$

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 73 = 9 or if RT 10 Col 78 = 9), then:

$$\text{Usual amt. spent on food at home} = 9999$$

Variable is expressed as a whole number, rounded when necessary. The expected range of nonmissing values for this variable is 0-9997.

For Wave 3:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 15 Col 158 = 1 and RT 15 Col 163 = 1), then:

$$\begin{array}{l} \text{Usual amt. spent} = (\text{RT 15 Col 154-157}) - (\text{RT 15 Col 159-162}) \\ \text{on food at home} \end{array}$$

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 158 = 2 and RT 15 Col 163 = 2), then:

$$\begin{array}{l} \text{Usual amt. spent} \quad (\text{RT 15 Col 154-157} - (\text{RT 15 Col 159-162})) \\ \text{on food at home} \quad = \frac{\text{-----}}{\quad 4.3} \end{array}$$

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 158 = 1 and RT 15 Col 163 = 2), then:

$$\begin{array}{l} \text{Usual amt. spent} \quad (\text{RT 15 Col 159-162}) \\ \text{on food at home} \quad = (\text{RT 15 Col 154-157}) - \frac{\text{-----}}{\quad 4.3} \end{array}$$

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 158 = 2 and RT 15 Col 163 = 1), then:

= 2 and RT 15 Col 163 = 1), then:

Usual amt. spent (RT 15 Col 154-157)
= ----- - (RT 15 Col 159-162)
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT 15 Col 158 = 1 and RT 15 Col 163 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 154-157)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 158 = 2 and RT 15 Col 163 = 0), then:

(RT 15 Col 154-157)
Usual amt. spent on food at home = -----
4.3

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 158 = 8 or if RT 10 Col 163 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 158 = 9 or if RT 10 Col 163 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of non-missing values for this variable is 0-9997.

For Wave 4:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 15 Col 243 = 1 and RT 15 Col 248 = 1), then:

Usual amt. spent = (RT 15 Col 239-242) - (RT 15 Col 244-247)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 243 = 2 and RT 15 Col 248 = 2), then:

Usual amt. spent (RT 15 Col 239-242) - (RT 15 Col 244-247)
= -----
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 243 = 1 and RT 15 Col 248 = 2), then:

Usual amt. spent (RT 15 Col 244-247)
= (RT 15 Col 239-242) - -----
on food at home 4.3

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 243 = 2 and RT 15 Col 248 = 1), then:

Usual amt. spent (RT 15 Col 239-242)
= ----- - (RT 15 Col 244-247)
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT 15 Col 243 = 1 and RT 15 Col 248 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 239-242)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 243 = 2 and RT 15 Col 248 = 0), then:

(RT 15 Col 239-242)

Usual amt. spent on food at home = -----
4.3

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 243 = 8 or if RT 10 Col 248 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 243 = 9 or if RT 10 Col 248 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of non-missing values for this variable is 0-9997.

For Wave 5:

If household questionnaire questions 29 and 30 were answered on a per week basis (i.e., if RT 15 Col 328 = 1 and RT 15 Col 333 = 1), then:

Usual amt. spent = (RT 15 Col 324-327) - (RT 15 Col 329-332)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 328 = 2 and RT 15 Col 333 = 2), then:

Usual amt. spent (RT 15 Col 324-327) - (RT 15 Col 329-332)
= -----
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 328 = 1 and RT 15 Col 333 = 2), then:

Usual amt. spent (RT 15 Col 329-332)
= (RT 15 Col 324-327) - -----
on food at home 4.3

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 328 = 2 and RT 15 Col 333 = 1), then:

Usual amt. spent (RT 15 Col 324-327)
= ----- - (RT 15 Col 329-332)
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT Col 328 = 1 and RT 15 Col 333 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 324-327)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 328 = 2 and RT 15 Col 333 = 0), then:

(RT 15 Col 324-327)
Usual amt. spent on food at home = -----
4.3

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 328 = 8 or if RT 10 Col 333 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 328 = 9 or if RT 10 Col 333 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of non-missing values for this variable is 0-9997.

For Wave 6:

If household questionnaire questions 29 and 30 were answered on a per

week basis (i.e., if RT 15 Col 413 = 1 and RT 15 Col 418 = 1), then:
Usual amt. spent = (RT 15 Col 409-412) - (RT 15 Col 414-417)
on food at home

If household questionnaire questions 29 and 30 were answered on a per month basis (i.e., if RT 15 Col 413 = 2 and RT 15 Col 418 = 2), then:

Usual amt. spent (RT 15 Col 409-412) - (RT 15 Col 414-417)
= -----
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis and question 30 was answered on a per month basis (i.e., if RT 15 Col 413 = 1 and RT 15 Col 418 = 2), then:

Usual amt. spent (RT 15 Col 414-417)
= (RT 15 Col 409-412) - -----
on food at home 4.3

If household questionnaire question 29 was answered on a per month basis and question 30 was answered on a per week basis (i.e., if RT 15 Col 413 = 2 and RT 15 Col 418 = 1), then:

Usual amt. spent (RT 15 Col 409-412)
= ----- - (RT 15 Col 414-417)
on food at home 4.3

If household questionnaire question 29 was answered on a per week basis and question 30 was responded to with "none" (i.e., if RT Col 413 = 1 and RT 15 Col 418 = 0), then:

Usual amt. spent on food at home = (RT 15 Col 409-412)

If household questionnaire question 29 was answered on a per month basis and question 30 was responded to with "none" (i.e., if RT 15 Col 413 = 2 and RT 15 Col 418 = 0), then:

(RT 15 Col 409-412)
Usual amt. spent on food at home = -----
4.3

If response to household questionnaire question 29 or question 30 is "don't know" (i.e., if RT 15 Col 413 = 8 or if RT 10 Col 418 = 8), then:

Usual amt. spent on food at home = 9998

If response to household questionnaire question 29 or question 30 is "no answer" (i.e., if RT 15 Col 413 = 9 or if RT 10 Col 418 = 9), then:

Usual amt. spent on food at home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range of non-missing values for this variable is 0-9997.

3. Usual Amount of Money Spent per Week on Food Bought and Eaten Away from Home (By Wave)

For Wave 1:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 10 Col 167 = 1), then:

Usual amt. spent on food away from home = (RT 10 Col 163-66)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 10 Col 167 = 2), then:

(RT 10 Col 163-166)
Usual amt. spent on food away from home = -----
4.3

If response to household questionnaire question 31 is "don't know" (i.e., if RT 10 Col 167 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 10 Col 167 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 2:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 83 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 79-82)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 83 = 2), then:

Usual amt. spent on food away from home = $\frac{(RT\ 15\ Col\ 79-82)}{4.3}$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 83 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 83 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 3:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 168 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 164-167)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 168 = 2), then:

Usual amt. spent on food away from home = $\frac{(RT\ 15\ Col\ 164-167)}{4.3}$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 168 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 168 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 4:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 253 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 249-252)

If household questionnaire question 31 was answered on a per month basis

(i.e., if RT 15 Col 253 = 2), then:

Usual amt. spent on food away from home = $\frac{\text{(RT 15 Col 249-252)}}{\text{4.3}}$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 253 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 168 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 5:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 338 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 334-337)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 338 = 2), then:

Usual amt. spent on food away from home = $\frac{\text{(RT 15 Col 334-337)}}{\text{4.3}}$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 338 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 338 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

For Wave 6:

If household questionnaire question 31 was answered on a per week basis (i.e., if RT 15 Col 423 = 1), then:

Usual amt. spent on food away from home = (RT 15 Col 419-422)

If household questionnaire question 31 was answered on a per month basis (i.e., if RT 15 Col 423 = 2), then:

Usual amt. spent on food away from home = $\frac{\text{(RT 15 Col 419-422)}}{\text{4.3}}$

If response to household questionnaire question 31 is "don't know" (i.e., if RT 15 Col 423 = 8), then:

Usual amt. spent on food away from home = 9998

If response to household questionnaire question 31 is "no answer" (i.e., RT 15 Col 423 = 9), then:

Usual amt. spent on food away from home = 9999

Variable is expressed as a whole number, rounded when necessary. The expected range on non-missing values for this variable is 0-9999.

4. Body Mass Index

$$\text{BMI} = \frac{\text{weight in kilograms}}{(\text{height in meters})^2}$$

$$\text{weight kilograms} = \frac{(\text{RT 20 Col 135-137})}{2.2}$$

$$\text{height in meters} = \frac{((\text{RT 20 Col 138}) \times 12) + (\text{RT 20 col 139-140})}{39.37}$$

If weight (RT 20 Col 135-137) or height (RT 20 Col 138-140) is "don't know" (998), then BMI = 99.98.

If weight or height is "no answer" (999), then BMI = 99.99.

If weight is "don't know" and height is "no answer," or vice versa, then BMI = 99.99.

Calculated for participating women only. Variable is expressed in 4 characters with 2 implied decimal places. The expected range of nonmissing values for this variable is approximately 10.00-40.00.

5. Meal Planner/Preparer

Is the individual the main meal planner/preparer?

If (RT 20 Col 8-9) = (RT 20 Col 29-30), then answer is yes (1).

If (RT 20 Col 8-9) NE (RT 20 Col 29-30), then answer is no (0).

6. Race of children

and

7. National Origin of Children

Children are assigned the race and national origin of their mother/caretaker. The screener ID for each child's mother/caretaker is given on the child's RT 20 Col 90-91. This number is matched to the screener ID (RT 20, Col 33-34) on the female respondent's record to identify the mother/caretaker. The codes for race and for national origin on her record are then ascribed to the child.

8. Employment status of the male head of household

If RT 10 Col 142 = 1 or 2 and RT 10 Col 146-147 = 35-97, then employment status = 1 (full-time).

If RT 10 Col 142 = 0 or 3-7 and RT 10 Col 143 = 1 and RT 10 Col 146-147 = 35-97, then employment status = 1 (full-time).

If RT 10 Col 142 = 1 or 2 and RT 10 Col 146-147 = 1-34, then employment status = 2 (part-time).

If RT 10 Col 142 = 0 or 3-7 and RT 10 Col 143 = 1 and RT 10 Col 146-147 = 1-34, then employment status = 2 (part-time).

If RT 10 Col 142 = 0 or 3-7 and RT 10 Col 143 = 2, then employment status = 3 (not employed).

If RT 10 Col 142 = 8 or 9, then employment status = 8 (not reported).

If RT 10 Col 142 = 0-7 and RT 10 Col 146-147 = 98 or 99, then employment status = 8 (not reported).

9. Employment status of female respondent:

If RT 20 Col 93 = 1 or 2 and RT 20 Col 97-98 = 35-97, then employment status = 1 (full-time).

If RT 20 Col 93 = 0 or 3-7 and RT 20 Col 94 = 1 and RT 20 Col 97-98 = 35-97, then employment status = 1 (full-time).

If RT 20 Col 93 = 1 or 2 and RT 20 Col 97-98 = 1-34, then employment status = 2 (part-time).

If RT 20 Col 93 = 0 or 3-7 and RT 20 Col 94 = 1 and RT 20 Col 97-98 = 1-34, then employment status = 2 (part-time).

If RT 20 Col 93 = 0 or 3-7 and RT 20 Col 94 = 1 and RT 20 Col 97-98 = 1-34, then employment status = 3 (not employed).

If RT 20 Col 93 = 8 or 9, then employment status = 8 (not reported).

If RT 20 Col 93 = 0-7 and RT 20 Col 97-98 = 98 or 99, then employment status = 8 (not reported).

10. Nutritive values, 4-day average

For each nutrient, the average intake was determined by summing the values for each of the 4 days of intake data (RT 40 Col 116-475) and dividing the sum by 4.

11. Wave completed? (by wave, waves 2-6)

This is a 2-category variable (wave not completed, wave completed).

12. Number of waves completed

This is the sum of the number of waves in which the respondent participated. The range of possible values is 1-6.

13. Household Monthly Income

For waves 2-6, values for household monthly income were derived by asking the respondent if there had been any change in income since the last interview. If so, how much more or less? The amount of change was added to or subtracted from the previously reported income. In this documentation, "MINC" refers to monthly income.

Wave 1 MINC 1 = (RT 10, col. 192-196)

Wave 2 If (RT 15, col. 108) = blank, MINC 2 = blank

If (RT 15, col. 108) NE blank, then

If (RT 10, col. 192-196) = 99998, MINC 2 = 99998

14. Imputed Yearly Household Income for Households Not Reporting 1984 Income

Of the 1,341 households in the CSFII 1985 all-income sample, 131 (9.8 percent) did not make 1984 household income figures available. The possible reasons were (1) refused, (2) did not know, and (3) not a household in 1984.

For these households, 1984 household income was imputed based on households with similar characteristics participating in the survey using a statistical regression model technique. The procedure tested the hypothesis that selectivity bias existed, i.e., that factors associated with both the likelihood of nonreporting and the level of household income existed (see for example: G.S. Maddala, *Limited-Dependent and Qualitative Variables in Econometrics*, 1983, Cambridge

University Press, New York). The hypothesis was rejected at the 0.05 level of statistical significance.

A linear regression model relating 1984 household income to several household and personal characteristics available in the CSFII 1985 sample was estimated by Ordinary Least Squares using the Statistical Analysis System (SAS). The selection of variables and functional form was guided by standard labor economic and econometric concerns, both theoretical and practical. (see for example; Ronald Oaxaca, "Male-Female Wage Differentials in Urban Labor Markets," *International Economic Review*, Vol. 14, No. 3, October 1973).

For households that did not make 1984 income figures available, household income was imputed based on household and personal characteristics which were available for the male head of household and the oldest female respondent.

Regression coefficients were estimated from income-reporting households. Specifically 1984 household income, in thousands of dollars, was:

Income 84 = 15.95 + 2.83 * MHED
+ 2.87 * MHED2
- 10.37 * SCHOOL

```

+ 8.28 * SCHOOL2
+ 5.79 * EXPM

```

The associated regression statistics were:

```

N = 1,206
R-Square = 0.50
Adjusted R-Square = 0.48
F Statistic = 19.84.

```

The regression variables were defined as follows:

MHED = Male head's education, in years, divided by 10. If no male head, MHED = 0.

MHED2 = MHED**2.

SCHOOL = Oldest female respondent's education, in years, divided by 10.

SCHOOL2 = SCHOOL**2.

EXPM = Work experience of male head: (Age in years - (MHED * 10) - 6)/10.

If no male head, EXPM = 0.

EXPM2 = EXPM**2.

EXPF = Work experience of oldest female respondent: (Age in years - (SCHOOL * 10) - 6)/10.

EXPF2 = EXPF**2.

MHS = 1 If male head completed high school but not college.
= 0 Otherwise.

MCOL = 1 If male head completed college.
= 0 Otherwise.

FHS = 1 If oldest female respondent completed high school but not college.
= 0 Otherwise.

FCOL = 1 If oldest female respondent completed college.
= 0 Otherwise.

CHILDREN = Number of children in household age 1 to 18.

MPART = 1 If male head worked between 0 and 35 hours per week in last three months.
= 0 Otherwise.

FPART = 1 If oldest female respondent worked between 0 and 35 hours per week in last three months.
= 0 Otherwise.

MLF = 1 If male head was employed, on layoff, or looking for work last week.
= 0 Otherwise.

FLF = 1 If oldest female respondent was employed, on layoff, or looking for work last week.
= 0 Otherwise.

MULTFEM = 1 If more than one female age 19-50 years present in the household.
= 0 Otherwise.

U2 = 1 If suburban household.
= 0 Otherwise.

U3 = 1 If rural household.
= 0 Otherwise.
(Central city was the base.)

R2 = 1 If Midwest region household.
= 0 Otherwise.

R3 = 1 If Southern region household.
= 0 Otherwise.

R4 = 1 If Western region household.
= 0 Otherwise.
(Northeast was the base.)

T2 = 1 If renting dwelling.
= 0 Otherwise.

T3 = 1 If occupying residence without payment of cash.
= 0 Otherwise.
(Owning dwelling was the base.)

FARM = 1 If household owns a farm.
= 0 Otherwise.

MHEAD2 = 1 If no male head present.
= 0 Otherwise.

H2 = 1 If oldest female respondent's self-appraised health is excellent, very good, or good.
= 0 Otherwise.

E2 = 1 If oldest female respondent's origin is Hispanic.

= 0 Otherwise.
 (Non-Hispanic origin was the base.)

RA2 = 1 If oldest female respondent's race is black.
 = 0 Otherwise.

RA3 = 1 If oldest respondent's race is "other."
 = 0 Otherwise.
 (White race was the base.)

OCCM1 to OCCM7, male head's occupation, and OCCF1 to OCCF7, oldest female respondent's occupation:

If Occupational Classification System (1980) Occupation Code was
 003-199, OCCM1 OCCF1 = 1.
 = 0 Otherwise.
 (Managerial and Professional specialty occupations),

(203-389, Technical, sales, and administrative support occupations were the base.)

403-469, OCCM3 OCCF3 = 1.
 = 0 Otherwise.
 (Service occupations)

473-499, OCCM4 OCCF4 = 1.
 = 0 Otherwise.
 (Farming, forestry, and fishing occupations)

503-699, OCCM5 OCCF5 = 1.
 = 0 Otherwise.
 (Precision production, craft, and repair occupations)

703-889, OCCM6 OCCF6 = 1.
 = 0 Otherwise.
 (Operators, fabricators, and laborers)

x = 999, OCCM7 OCCF7 = 1.
 = 0 Otherwise.
 (Occupation not reported)

MHEDB = MHED * RA2.
 MHED2B = MHEDB**2.
 SCHOOLB = SCHOOL * RA2.
 SCHOOL2B = SCHOOLB**2.
 EXPMB = EXPM * RA2.
 EXPM2B = EXPMB**2.
 EXPFB = EXPF * RA2.
 EXPF2B = EXPFB**2.
 SCHOOLN = SCHOOL * MHEAD2.
 SCHOOL2N = SCHOOLN**2.
 SCHOOLNB = SCHOOL * RA2 * MHEAD2
 SCHLN2B - SCHOOLNB2**2.
 EXPFN = EXPFN * MHEAD2.
 EXPFN2 = EXPFN**2.
 EXPFBN = EXPF * RA2 * MHEAD2.
 EXPFN2B = EXPFBN**2.

Two households which did not make 1984 income figures available also did not make available the female respondent's education level (household ID numbers 10489 and 10949). For these respondents, the mean sample education level of 12.70 years was arbitrarily assigned in order to impute their 1984 household income.

Calculated by Food and Nutrition Service (Sections A-F below)

The USDA Food and Nutrition Service (FNS) created a set of variables that indicate the eligibility of households or individuals to participate in the Food Stamp, School Lunch, and WIC programs. These variables, described below, permit researchers to use uniformly defined measures of eligibility for USDA food programs.

A. TIMING CONSIDERATIONS

The program-eligibility variables were created on the basis of wave 1 (April to June 1985) CSFII data only. Their use in analyses of data from waves 2-6 is not recommended.

The Food Stamp net income limits that were in effect from July 1, 1984 to June 30, 1985 were the basis for the determination of income eligibility for food assistance. Given the absence of CSFII data on deductible expenses, a household's net income eligibility for Food Stamps was not determined; only gross income eligibility was computed. The Food Stamp gross income limits, which in reality apply only to households without elderly or disabled members, are 130 percent of the net income limits. The School Lunch and WIC programs impose no restrictions on the net income. Categorically eligible individuals with gross incomes not in excess of 130 percent of the Food Stamp net income limits may receive free school lunches, while such individuals in households with gross incomes not in excess of 185 percent of the Food Stamp net income limits may receive reduced-price school lunches or WIC benefits.

Users of the program-eligibility variables may note what appears to be an inconsistency between the Food Stamp gross income limits described above and the income limits that were used to screen households into the CSFII low-income sample. For example, the above-described gross income limit for a four-person household is \$1,105 per month; whereas the income limit for acceptance of such a household into the CSFII low-income sample was \$1,155. The difference exists because the Food Stamp gross income limits that were in effect from July 1, 1985 to June 30, 1986 were used in the CSFII screening process. Use of the more recent income limits seemed appropriate in that context given that five of the six waves of the 1985 panel are for the July 1, 1985 to June 30, 1986 period.

The earlier income limits were used as the basis for the program eligibility variables because the objective was to model as accurately as possible program eligibility at the time that the wave 1 data were collected. As previously noted, those data were collected during the final months that the earlier income limits were in effect.

B. MEASUREMENT OF GROSS INCOME

Wave 1 of the CSFII obtained information on total household income "last month" as well as information on the various components (sources) of income and the associated dollar amounts. Believing that it would provide a better measure of total income, the amounts of the income components were surveyed rather than using the reported total income.

Most component income amounts were reported for the previous month (e.g., wages, pensions), but business income and interest income were reported for the previous year. The yearly amounts were divided by 12 prior to summing the income components.

Missing data on income components complicated the computation of total income for some households. When a household failed to report whether any income from a specific source was received, it was assumed that no income was actually received from that source. A slightly different procedure was used when a household reported that some income was received from a source but failed to report the amount. In such cases it was assumed that the amount was \$0 for purposes of computing the household's total income, but a "flag" was set to indicate that the computed total does not include an unknown amount of income from a known source. In determining eligibility for Food Stamps, WIC, and School Lunch, both the computed income variable and the companion flag variables were used, as discussed below.

C. FOOD STAMP ELIGIBILITY

1. Unit Size

The legal unit of eligibility for Food Stamps is the "food unit"--those persons in a household who purchase and prepare food together. However, in computing a CSFII household's eligibility for Food Stamps, a simple, unadjusted measure of household size was used. This was done for two reasons. First, to avoid undue complexity in our algorithm for the program-eligibility variables, the same measure of household size was used in determining eligibility for Food Stamps, WIC, and School Lunch. The food unit is not the relevant household unit for the determination of WIC and School Lunch eligibility. Second, the gain in precision in the determination of Food Stamp eligibility that would be achieved by attempting to determine the size of each CSFII food unit would not justify the increased complexity of the eligibility algorithm.

2. Asset Test

To be eligible for Food Stamps, a household must pass an asset (resource) test as well as an income test. Both automobiles and liquid financial assets are considered in the actual implementation of this test. Only a very rough asset test was possible because the CSFII provides no information on automobiles and only indirect information on liquid financial assets. It was assumed that any reported interest income for the previous year was derived from a bank savings account paying 5-1/2 percent annual interest. That interest rate was used to capitalize the flow of interest income (i.e., the annual interest income was divided by .055 to obtain the implied balance in the saving account). If the computed balance was less than \$3,000 for a multiperson household with an elderly or disabled member, or less than \$1,500 for other households, then it satisfied the asset test for Food Stamp eligibility.

3. Income Test

As discussed in Section A, above, the Food Stamp net income eligibility of CSFII households was not assessed. On the basis of computed gross monthly income, it was determined whether a household was: (a) income eligible for Food Stamps (i.e., valid income amounts for all reported income sources, and computed total income not in excess of the gross income limit), (b) income ineligible for Food Stamps (i.e., computed total income in excess of the gross income limit), or (c) conditionally income eligible for Food Stamps (i.e., missing income amounts for one or more reported sources of income, and computed total income not in excess of the gross income limit).

4. Food Stamp Eligibility Variable (FSELIG)

The Food Stamp eligibility variable, FSELIG, is a household-level variable (record type 10) that reflects the outcome of our tests on assets and gross income. It takes on the following values:

- 0 - Ineligible
- 1 - Eligible
- 2 - Conditionally eligible (missing data on amount of income from known sources)
- 8 - Don't know
- 9 - No answer

The two missing data codes, 8 and 9, arise because of inability to compute a household's asset balance. This occurs when a household reported that some interest income was received but did not know or was otherwise unable or unwilling to say how much interest income was received.

Some households computed to be ineligible for Food Stamps reported that they had actually received them in the current month or in the previous month. In such a case, the initial eligibility determination was overridden and the eligibility variable was assigned a value of 1.

The decision regarding the treatment of conditionally eligible households is left to the individual researcher.

D. SCHOOL LUNCH ELIGIBILITY AND ACCESS

For each child born between 1967 and 1979, the CSFII obtained information on whether the child attended a school that served lunches, the usual number of school lunches that the child ate per week, and whether the lunches were received at no cost to the child. This information was used, along with the previously described measures of gross income and household size, to determine the minimum number of children in each household who have access to and are eligible for (a) free school lunches and (b) reduced-price school lunches. It is important to note that income-eligible children who do not attend schools that serve lunches are not classified as having access to an eligibility for school lunches.

The variables that count the number of eligible children in a household are defined to provide minimum counts so as to avoid a potentially troublesome missing data problem. For example, consider a three-child household in which the children are eligible to receive free school lunches. If two of the children were reported to attend schools that serve lunches, but no information was provided on whether the third child attends such a school, then the free lunch eligibility/access variable was assigned a value of 2. This was judged to be more useful to researchers than assigning the variable a missing value code.

1. Income Test

Unlike the Food Stamp Program, there is no asset test for School Lunch eligibility. There are two price categories of income eligibility: eligible for a free lunch (gross income not in excess of 130 percent of the poverty guidelines (the Food Stamp net income limits are identical to the poverty guidelines)) and eligible for a free or reduced-price lunch (gross income not in excess of 185 percent of poverty).

In a manner analogous to that described in Section C.3 above, it was determined whether students in a household were income ineligible, income eligible, or conditionally income eligible for free school lunches, and a similar determination was made for free or reduced-price lunches.

For some CSFII households, the children were determined to be income ineligible for one or both of the lunch price categories, but one or more of the children was reported to have actually received free lunches (information on the receipt of reduced-price lunches is not available). For such households, the initial income eligibility determination was overridden and all of the children who attended schools that served lunches were counted as being eligible for and having access to both price categories of school lunches.

2. Free Lunch Eligibility/Access Variables (NSLNUM30 and NSLNMF30)

The variable NSLNUM30 provides a count of the minimum number of children in a household who are eligible for and have access to free school lunches. This variable takes on values between 0 and 6. There are no missing value codes for the variable.

The variable NSLNMF30 provides qualitative information on the result of the free-lunch income eligibility test. It takes on the following values:

- 0 - Household has one or more children with access to school lunches but is income ineligible for free lunches
- 1 - Household has one or more children with access to school lunches and is income eligible for free lunches
- 2 - Household has one or more children with access to school lunches and is conditionally income eligible for free lunches (missing data on amounts of income from know sources)
- 3 - Household has no children with access to school lunches.

3. Free or Reduced-Priced Lunch Eligibility/Access Variables (NSLNUM85 and NSLNMF85)

The variable NSLNUM85 provides a count of the minimum number of children in a household who are eligible for and have access to either free or reduced-price school lunches. The range of values is 0 to 6 and there are no missing data codes. The variable NSLNM85 is the free or reduced-prices analogue to NSLNMF30 and has the same range of outcome codes.

4. A Word of Caution Regarding the School Breakfast Program

Many schools that serve lunches do not also serve breakfasts. This means that the School Lunch eligibility/access variables are not reliable indicators of eligibility for and access to School Breakfasts.

E. WIC ELIGIBILITY

Children ages 0-4 years, pregnant women, mothers who are not more than 6 months post-partum, and nursing mothers who are no more than 1 year post-partum are eligible to receive WIC benefits if both of the following are true: (a) household gross income does not exceed 185 percent of the poverty guidelines, and (b) the individuals are at "nutritional risk" according to guidelines adopted by their State of residence.

The WIC eligibility variables that were created incorporate most of the critical components of the categorical and income eligibility criteria but neglect the nutritional risk criteria. The CSFII data do not permit the assessment of nutritional risk as it is defined under the WIC Program. Researchers should note this deficiency in the WIC eligibility variables.

Unlike Food Stamp benefits, WIC benefits are provided to individuals rather than to households. Accordingly, a variable was constructed to indicate the WIC eligibility of each individual in the 1985 CSFII as of Wave 1; this is a record type 20 variable. A variable that provides a count of the minimum number of WIC-eligible persons in each household was also created; this is a record type 10 variable.

An individual-level indicator of eligibility was created for WIC but not for School Lunch because most WIC-eligible individuals in the CSFII participated in the dietary intake component of the survey, whereas very few individuals who were eligible for School Lunch did. Thus, researchers have the opportunity to analyze the impacts on dietary intakes of WIC participation. No opportunity exists to analyze the corresponding impacts of the School Lunch Program.

1. Data Inadequacies

Two aspects of the CSFII complicate and introduce error into the determination of WIC eligibility. First, information on pregnancy and lactation was obtained only for women ages 19-50 years. This reduced the ability to determine the WIC eligibility of girls less than 19 years old. Second, it is not possible to determine with certainty which female in the household was the mother of an infant under age 0-12 months. Consequently, it was not possible to determine the WIC eligibility of nonlactating mothers of infants. Both of these complications were of greater significance in determining the eligibility of individuals than in obtaining a count of the number of WIC eligibles in a household. In computing the latter variable, it was assumed that in any household with an eligible infant age 0-6 months, there was also an eligible mother.

2. Income Test

The WIC Program has only one income eligibility category and no asset test. To be eligible for WIC, an individual must reside in a household whose gross income does not exceed 185 percent of the poverty guidelines. Using previously described procedures, it was determined whether individuals in a household were income ineligible, income eligible, or conditionally income eligible for WIC. When any seemingly ineligible WIC participants in a household were found, the initial eligibility determination was overridden and all members of the household were reclassified as being income eligible.

3. WIC Eligibility Variables (WICNUM, WICNUMF, and WICELIG)

The variable WICNUM is a record type 10 variable that provides a count of the minimum number of WIC-eligible persons in a household. This variable takes on values between 0 and 4. For reasons that Section D, this variable has no missing value codes.

Information on the outcome of the WIC income test is provided by WICNUMF, which is also a record type 10 variable. The four possible values of this variable have the following interpretations:

- 0 - Household has one or more members who are categorically eligible for WIC, but its gross income exceeds the WIC eligibility limit
- 1 - Household has one or more members who are categorically eligible for WIC, and its gross income does not exceed the WIC eligibility limit
- 2 - Household has one or more members who are categorically eligible for WIC, and its gross income conditionally satisfies the WIC eligibility test (missing data on income amounts from known sources)
- 3 - Household has no members who are categorically eligible for WIC

WICELIG is a record type 20 variable that indicates whether an individual is eligible for WIC. This variable has missing data codes, primarily for the two reasons discussed in Section E.2. The possible values of this variable are as follows:

- 0 - Ineligible (either categorically ineligible, income ineligible, or both)
- 1 - Eligible
- 2 - Conditionally eligible (missing data on income amounts from known sources)
- 8 - Don't know

F. FINAL COMMENTS

The Food Stamp, School Lunch, and WIC eligibility variables that were created do not reflect outcomes of the full application of all eligibility rules for those programs. Rather, they reflect the results of the application of approximations of subsets of each program's eligibility rules. There are several ways in which the variables could be further refined; however, the task of programming those refinements would be large, and it is believed that the resultant increases in accuracy would be small.

The programming specifications for the variables that indicate eligibility for USDA Food Programs are as follows:

1. Asset and income eligibility computations
 - (a) Asset eligibility (for food stamps)
 - i. Asset amount
If RT 10, col 240-244 GT 0; ASSETS = min(99997, (RT 10, col 240-244)/.055)

If INCTST85 = 9 and WICHH GT 0; WICNUM = 9; WICNUMF = 9

vi. Adjust for participation if necessary
If (WICNUM = 8 or 9 or INCTST85 = 0) and TWICPART GT 0; WICNUM
= max(WICHH, TWICPART); WICNUMF = 1

The following CSFII variables were used to create the food program eligibility variables:

Record Type	Columns	Description
10	34-35	Household size
10	84	Number of persons under age 1 in household
10	90	Number of persons age 60 or older
10	170	Household receipt of food stamps this month flag
10	181	Household receipt of food stamps last month flag
10	197	Income from wages or salary from a job including tips and commissions: flag
10	198-202	Income from wages or salary from a job including tips and commissions: value
10	203	Income from any social security or supplemental security income: flag
10	204-208	Income from any social security or supplemental security income: value
10	209	Income from a pension or retirement: flag
10	210-214	Income from a pension or retirement: value
10	215	Income from unemployment or worker's compensation: flag
10	216-220	Income from unemployment or worker's compensation: value
10	221	Income from AFDC, General Assistance Programs: flag
10	222-226	Income from AFDC, General Assistance Programs: value
10	227	Income from other sources such as alimony, child support: flag
10	228-232	Income from other sources such as alimony, child support: value
10	233	Spendable income from business or farm last year: flag
10	234-238	Spendable income from business or farm last year: value
10	239	Spendable interest, dividends, annuities last year: flag
10	240-244	Spendable interest, dividends, annuities last year: value
20	40	Sex
20	41-42	Age
20	43	Pregnancy status
20	44	Lactation status
20	53-54	Month individual intake data was collected
20	57-58	Year individual intake data was collected
20	72-73	Month individual was born
20	76-77	Year individual was born

20	83	Does (name) attend a school which serves school lunches?
20	85	Does (he/she) get these school lunches free?
20	89-90	Who in this household received WIC benefits last month? (This variable has since been recoded.)

GLOSSARY

Age - Calculated from date of birth as reported by the household informant.

Alpha-tocopherol equivalent - See "Vitamin E."

Calcium conversion factor - A factor that expresses the amount of calcium in a given milk product, i.e., food codes beginning with 1, as a proportion of the amount of calcium in the same amount (weight) of fluid whole cow's milk. For example, the calcium conversion factor for cheddar cheese was calculated by dividing the amount of calcium in 100 grams of cheddar cheese (721 milligrams) by the amount of calcium in 100 grams of fluid milk (119 milligrams) resulting in a calcium conversion factor of 6.06. For food codes not beginning with 1, the calcium conversion factor was set to 1 and has no meaning. The calcium conversion factor is found in positions 109-112 of record type 30.

Carotenes - Beta-carotene and other provitamin A carotenoids (see Vitamin A).

Central city - See "Urbanization."

Dietary fiber - Total dietary fiber including both the insoluble fraction (neutral detergent fiber) and the soluble fraction (for example, gums in cereal grains and pectin in fruits and vegetables).

Dietary intake - See "Food intake."

Eating occasion - Any report of eating or drinking by a respondent. Each change in time of eating reported on the questionnaire was considered to be a separate eating occasion.

Educational level - Adult respondents were categorized according to the highest grade of formal schooling they completed: (a) elementary--grade 8 or less; (b) some high school--1 to 3 years; (c) high school completed--4 years or high school equivalency; (d) college--1 to 5 years or more; or (e) not reported. Formal schooling does not include trade or vocational schooling or company training unless credit is given which would be accepted at a regular school or college.

Employment status - Employment includes any work done during the week prior to the interview for which money, goods, or services were received, including active duty in the Armed Forces. A respondent was also "employed" if she had a job but was not actually at work that week. Full-time (35 hours or more) or part-time (1 through 34 hours) status was determined by the number of hours per week usually worked during the past 3 months.

Female head of household - Person indicated as such by the household informant; usually the wife of the male head of household if a male head was present.

Folacin - Total folate activity.

Food group - See "Table Notes" for descriptions of the various food groups and subgroups.

Food intake - All beverages (except water) and foods ingested by the respondent. Does not include inedible parts of foods (such as bones, rinds, and seeds); uneaten portions of food; or vitamin, mineral, or other supplements.

Food obtained and eaten away from home - Any food or beverage ingested by a respondent that did not come from the home food supply. Food obtained away from home and carried home to be eaten, such as take-home pizza, was considered part of the home food supply. See "Home food supply."

Geographic division - An area of the conterminous United States as defined by the U.S. Department of Commerce for the 1980 Census of Population. The nine census geographic divisions and their States are as follows:

East North Central: Illinois, Indiana, Michigan, Ohio, Wisconsin.

East South Central: Alabama, Kentucky, Mississippi, Tennessee.

Middle Atlantic: New Jersey, New York, Pennsylvania.

Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming.

New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island,

Vermont.

Pacific: California, Oregon, Washington.

South Atlantic: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia.

West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

West South Central: Arkansas, Louisiana, Oklahoma, Texas.

Home food supply - Foods and beverages ingested at home and food items carried from home and eaten elsewhere, such as those in picnics and packed lunches.

Household - A group of individuals who regularly occupy a house, an apartment, or a room or group of rooms that constitute a housing unit; included persons temporarily absent, such as those who were in a dormitory, in the hospital, or traveling. Group quarters such as rooming houses, military barracks, and institutions were not included in the survey.

Household informant - The household member who gave information on household characteristics such as income, food expenditures, and participation in food assistance programs; usually the female head of household.

Household size - Number of individuals in a household. See "Household."

Income - Household informant's estimate of the total income from all sources, before taxes, of all household members in 1985. Called "household income."

Lactating female - A respondent who at the time of the interview was breast-feeding a child born since January 1, 1982.

Male head of household - Person indicated as such by the household informant; usually the husband of the female head of household.

Main meal planner/preparer - Person identified by the household informant as most responsible for planning and preparing the household's meals.

Midwest - See "Region."

Mother/caretaker - The mother or guardian of a child respondent or the person most responsible for that child.

Niacin - Nicotinic acid and nicotinamide present in foods. Does not include niacin converted from dietary tryptophan, a niacin precursor.

Nonmetropolitan areas - See "Urbanization."

Northeast - See "Region."

Nutrient density - Amount of nutrient per 1,000 kilocalories of food energy intake.

Nutrient intake - Nutrient content of all foods and beverages (except water) ingested by the respondent. Vitamin, mineral, and other supplements are excluded. See "Methodology" (Appendix A) for information on the nutrient data base.

One-day dietary recall - A recall of beverages and foods ingested during the day preceding the interview--the 24 hours from 12:00 a.m. (midnight) to 11:59 p.m.

Poverty - See "Methodology" (Appendix A) for explanation of how percentage of poverty level was determined.

Pregnant female - A respondent who at the time of the interview answered, "Yes," to the question, "Are you pregnant?"

Race - Self-reported by adult respondents as white, black, Asian/Pacific Islander, or Aleut/Eskimo/ American Indian. Children were assigned the race of their mother/caretaker.

Recommended Dietary Allowances (RDA) - Levels of nutrient intakes considered by the Food and Nutrition Board of the National Academy of Sciences to be adequate to meet the nutritional needs of practically all healthy individuals (3). Intakes below RDA are not necessarily inadequate, but the risk of inadequacy increases to the extent that intake is less than the recommended level. The 1980 RDA for the

various sex-age groups are given in Appendix B.

Region - An area of the conterminous United States as defined by the U.S. Department of Commerce for the 1980 Census of Population. The four census regions and their States are as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

Midwest (formerly North Central): Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia.

West: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

Retinol equivalents - See "Vitamin A."

Snack - Any eating occasion designated by the respondent as a snack, a coffee break, or a beverage break.

South - See "Region."

Spring - April, May, and June.

Suburban areas - See "Urbanization."

Supplements - Vitamins and minerals ingested by respondents in a form other than in food or beverage. Not included in food and nutrient intake data.

Urbanization - Based on metropolitan statistical areas (MSA) defined by the U.S. Department of Commerce for the 1980 Census of Population. The degrees of urbanization used in this report are as follows:

Central city: A city which has a population of 50,000 or more and is the main city within an MSA.

Suburban area: Generally within the boundaries of an MSA but not within the legal limits of the central city.

Nonmetropolitan area: Any area not within an MSA.

User - Any participant who reported eating a food item from a specified food group or subgroup at least once during the surveyed day.

Vitamin A - Vitamin A activity derived from both preformed vitamin A (retinol) and provitamin A carotenoids. Values in tables are expressed as international units (IU) and as retinol equivalents (RE). One IU equals 0.3 micrograms of retinol, 0.6 micrograms of beta-carotene, or 1.2 micrograms of other carotenoids having vitamin A activity. One RE equals 1 microgram retinol, 6 micrograms of beta-carotene, or 12 micrograms of other provitamin A carotenoids.

Vitamin E - Vitamin E activity derived from alpha-, beta-, and gamma-tocopherol and alpha-tocotrienol. Value is expressed as alpha-tocopherol equivalents. One alpha-tocopherol equivalent equals 1 milligram of alpha-tocopherol, 2 milligrams of beta-tocopherol, 10 milligrams of gamma-tocopherol, or 3.3 milligrams of alpha-tocotrienol.

Weighting factors - Factors applied to data from completed questionnaires to compensate for differing response rates among the primary sampling units and among individuals of similar ages. See "Methodology" (Appendix A) for a further discussion.

West - See "Region."

DATASET CHARACTERISTICS AND FORMAT--CSFII 1985, 4 DAYS

DATASET CHARACTERISTICS

Logical record length: 475
Number of records: 86,115
Record format: Fixed block

FILE STRUCTURE

The CSFII 1985 4-day data are in a hierarchical file containing seven types of records. The record type is located in columns 10-11 of every record.

Record types 10 and 15 contain data pertaining to the household, such as basic household characteristics and information obtained during the screening process that was used to determine survey eligibility. There is one record type 10 and one record type 15 for each household. Record type 10 has basic data from the first wave of data collection (wave 1) plus some calculated variables for waves 2-6. Record type 15 has updated data from waves 2-6. Columns 2-6 of these record types contain the household identification number, which uniquely identifies each household.

There is one record type 20 for each member of the household who completed at least 4 waves of the survey. Thus, each household unit may contain more than one record type 20. Record type 20 contains personal data, but no intake data, for each of these household members. Each household member is uniquely identified by the household identification number found in columns 2-6 and their household grid number found in columns 8-9.

The screener identification number found in columns 33-34 of record types 20, 25, 30, and 40 may also be used to identify survey participants within a household. The records of women age 19-50 participating in the survey have screener identification numbers of 10, 20, 30, 40, 50, or 60. The records of their children age 1-5 who were participants have screener identification numbers beginning with the same tens digit as their mother. For example, a participant having a screener identification number of 10 is the mother of the participants having screener identification numbers of 11 and 12. Columns 466-470 of record types 20 and 25 tell which of waves 2-6 were selected to be days 2-4.

Records types 25, 30, 40, and 45 contain intake data for individuals. A single record type 25 contains a participant's daily nutrient intakes expressed as percentages of the 1980 Recommended Dietary Allowances by day. There is one record type 25 for each participant. Each record type 25 includes all 4 days. Each record type 30 contains data that describe an individual food item. There is one record per food item reported by each individual for each day of participation. Record type 40 contains daily nutrient intakes for each participant. There is one record type 40 for each of the 4 days. Record type 45's contain average daily nutrient intakes for each participant. There is one record type 45 for each participant. Columns 29-33 tell which of waves 2-6 were selected to be days 2-4.

For record types 25, 30, 40, and 45, the household identification number is located in columns 2-6, the household grid number in columns 8-9, and the screener identification numbers in columns 33-34, except for record type 45, which does not have screener identification number. The day number is located in column 7 of record types 30 and 40.

FILE SEQUENCE

The datafile is in sequence by household identification number and by household grid number within the household. All data pertaining to one household and to one individual are together. For example:

Household identification number	Household grid number	Day number	Record type
10001	N/A	N/A	10
10001	N/A	N/A	15
10001	01	N/A	20
10001	01	N/A	25
10001	01	N/A	45
10001	01	1	30
10001	01	1	30
10001	01	1	30
.	.	.	.
.	.	.	.
.	.	.	.
10001	01	1	40
10001	01	2	30
10001	01	2	30
.	.	.	.
.	.	.	.
.	.	.	.
10001	01	2	40
10001	01	3	30
.	.	.	.
.	.	.	.
.	.	.	.
10001	01	4	40
10001	03	N/A	20
10001	03	N/A	25
10001	03	N/A	45
10001	03	1	30
10001	03	1	30
.	.	.	.
.	.	.	.
.	.	.	.
10001	03	4	40
10002	N/A	N/A	10

The records are sorted in the following order:

Household identification number	Columns 2-6
Household grid number	Columns 8-9
Day number	Column 7 (record types 30 and 40 only)

Record type
AM/PM
Time
Line number

Columns 10-11
Columns 74 (record type 30 only)
Columns 70-73 (record type 30 only)
Columns 76-77 (record type 30 only).

KEY FIELDS

Frequently used information is repeated in many of the record types in key fields found in columns 1-37 of record types 10 and 15 and in columns 1-44 of record types 20, 25, 30, 40, and 45 with the exception of columns 29-34 in record type 45. Otherwise, the key fields are the same for all seven record types for columns 1-44 with the exception of columns 8 and 9.

Household income expressed as a percentage of poverty is also found in all record types:

Record type	Column numbers
10, 15, 20, 25	472-475
30, 40	64-67
45	40-43

The household sample weight factor, found in columns 33-37 of record types 10 and 15, may be used with variables that describe the household when the household is the unit of observation. The individual weight factor, found in columns 40-44 of record types 20, 25, 30, and 40 and columns 46-50 of record type 45, may be used with variables related to individuals when the individual is the unit of observation.

Persons With Zero Intakes

Participants who reported no food intake do not have record type 30's for the no-intake days. They do, however, have record type 40's for the no-intake days that are zero-filled, and the zeros were used in computing their record types 45 and 25.

Record Counts

Record type	Number
10	982
15	982
20	1,334
25	1,334
45	1,334
30 Wave 1	19,524
30 Day 2	18,891
30 Day 3	18,215

This file contains the 7-digit food codes found in the Manual of Food Codes for Individual Intake (file no. 6) with an abbreviated (51 characters or less) version of the description for each code. This file does not contain all the information found in the descriptions in the manual. It is provided as a potential time-saving aid to the users of the dataset. For example, the 51-character description file can be linked to the data file when generating listings of individuals' food intakes or to other listings when exact identification of the food items is not necessary.

FOOD CODE	*-----*	FOOD DESCRIPTION	-----*
1100000		MILK, HUMAN	
1110000		MILK, NFS	
1111100		MILK, COW'S, FLUID, WHOLE
