## **ABSTRACT**

The table set includes national estimates of the amounts of retail-level commodities per person estimated from day 1 dietary intake data of 9033 individuals, ages 2 years and over, in the What We Eat In America, National Health and Nutrition Examination Survey (WWEIA, NHANES), 2001-2002 [1] and Food Intakes Converted to Retail Commodities Database (FICRCD), 2001-2002 [2]. These estimates are included for 23 age-gender groups. See reference 1 for a description of the WWEIA, NHANES 2001-2002 methodology. In FICRCD, retail-level commodities are defined as that available for purchase in retail stores, supermarkets, or other retail food outlets with a few exceptions such as industrial shortening and corn syrup solids that are solely used by the food industry and game meats that are obtained elsewhere.

There are eight major retail-level commodity categories in FICRCD: Dairy Products; Fats and Oils; Fruits; Grains; Meat, Poultry, Fish and Eggs; Nuts; Caloric Sweeteners; and Vegetables, Dry Beans and Peas (legumes). Because each of these has several components, FICRCD has 65 retail-level commodities, in total. Foods within each commodity are converted into a single commodity type. For example, canned, frozen, and dried carrots consumed in the surveys are converted to raw carrots commodity. Some of the retail-level commodity types included in FICRCD are: fluid milk; yogurt; cheese; butter; oils; shortening; fruits and vegetables with refuse; grain products, except rice, as respective flours; uncooked rice; dry beans and peas; raw nuts without the shell; uncooked, boneless meat, fish, and poultry; and caloric sweeteners. Appendix A includes the list of foods within each commodity category. The average amounts of selected commodities estimated from the reported food intakes of individuals 2 years and over are listed below:

- Fluid milk contributed 84% to the total dairy products commodity (336g).
- Salad or cooking oils contributed 53% to the total fats and oils commodity (34g).
- Oranges contributed 41%, apples 16%, bananas and melons about 8%, each to the total fruit commodity (342g).
- Wheat flour was the major component of grains commodity, contributing 74% to the total grains (127g).
- Beef contributed 36% and chicken 31% to the total meat, poultry, and fish commodity (163g).
- Tomatoes contributed 30%, potatoes 28%, sweet corn 7%, and total leafy vegetables about 6% to the total vegetables commodity (360g).
