Abstract

Gebhardt, Susan E., and Robin G. Thomas. 2002. Nutritive Value of Foods. U.S. Department of Agriculture, Agricultural Research Service, Home and Garden Bulletin 72

This publication gives in tabular form the nutritive values for household measures of commonly used foods. It was first published in 1960; the last revision was published in 1991. In this revision, values for total dietary fiber have been added and phosphorus values have been removed. Values are reported for water; calories; protein; total fat; saturated, monounsaturated, and polyunsaturated fatty acids; cholesterol; carbohydrate; total dietary fiber; calcium; iron; potassium; sodium; vitamin A in IU and RE units; thiamin; riboflavin; niacin; and ascorbic acid (vitamin C). Data are from the U.S. Department of Agriculture Nutrient Database for Standard Reference, Release 13.

Keywords: ascorbic acid, calcium, calories, cholesterol, dietary fiber, fatty acids, foods, iron, niacin, nutrient composition, nutrient data, potassium, protein, riboflavin, salt, sodium, total fat, vitamin A

Mention of trade names, commercial products, or companies in this publication is solely for the purpose of providing specific information and does not imply recommendation or endorsement by the U.S. Department of Agriculture over others not mentioned.

Revised October 2002

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, sexual orientation, or marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Office of Civil Rights, Room 326-W, Whitten Building, 1400 Independence Avenue, SW, Washington, D.C. 20250-9410 or call (202) 720-5964 (voice and TDD). USDA is an equal opportunity provider and employer

Nutritive Value of Foods

by Susan E. Gebhardt and Robin G. Thomas, U.S. Department of Agriculture, Agricultural Research Service, Nutrient Data Laboratory, Beltsville, Maryland

Introduction

An 8-oz glass of milk, a 3-oz slice of cooked meat, an apple, a slice of bread. What food values does each contain? How much cooked meat will a pound of raw meat yield? How much protein should a healthy 14-year-old boy get each day?

Consumers want ready answers to questions like these so they can plan nutritious diets for themselves and their families. Also, nutritionists, dietitians, and other health professionals use this type of information in their daily work.

In response, the U.S. Department of Agriculture published the first edition of this bulletin in 1960. USDA nutrition researchers have revised it many times since to reflect our expanded knowledge, to add or subtract specific values, and to update the ever-growing list of available, commonly used foods.

Further Information

The USDA Nutrient Database for Standard Reference is a more technical compilation of nutrient information, with data for a much more extensive list of foods and nutrients than this publication provides. It is revised regularly and published on the USDA Nutrient Data Laboratory (NDL) web site, <www.nal.usda.gov/fnic/foodcomp>. It replaces USDA's Agriculture Handbook 8, "Composition of Foods. . .Raw, Processed, Prepared," commonly referred to as "Handbook 8," and its revised sections, which are out of print. Special-interest tables—such as Isoflavone Content of Foods—are also published on the NDL web site.

The USDA Nutrient Database for Standard Reference and special-interest tables produced by NDL are also available on CD-ROM from the U.S. Government Printing Office (GPO). See the back of the title page for contact information.

Other nutrition publications that may be useful include "Nutrition and Your Health: Dietary Guidelines for Americans," USDA Home and Garden Bulletin 232; "Making Healthy Food Choices," USDA Home and Garden Bulletin 250; and "Check It Out: The Food Label, the Pyramid, and You," USDA Home and Garden Bulletin 266. These publications may also be purchased from GPO. See the back of the title page for contact information.

The Dietary Guidelines for Americans and the Food Guide Pyramid can be found on USDA's Center for Nutrition Policy and Promotion web site, <<http://www.usda.gov/cnpp>>, or write to them at 3101 Park Center Dr., Room 1064, Alexandria, VA 22302-1594. Table 1. Equivalents by Volume and Weight

This table contains some helpful volume and weight equivalents. Following is an example that illustrates how you can use the table:

Example. For milk, the nutrient profile covers a 1-cup serving (see page 20, table 9). Let's say you use 2 tablespoons of milk in your coffee. In table 1, you see that 1 cup equals 16 tablespoons, so the 2 tablespoons you consume are two-sixteenths or one-eighth of 1 cup. To find out the nutritive value of the amount you actually consume—2 tablespoons—you need to divide the nutrient values listed for milk by 8.

Volume

1 gallon (3.786 liters; 3,786 ml)	4 quarts
1 quart (0.946 liter; 946 ml)	4 cups or 2 pints
1 cup (237 ml)	8 fluid ounces, $\frac{1}{2}$ pint, or 16 tablespoons
2 tablespoons (30 ml)	1 fluid ounce
1 tablespoon (15 ml)	3 teaspoons
1 pint	2 cups

Weight

1 pound (16 ounces)	453.6 grams
1 ounce	28.35 grams
$3\frac{1}{2}$ ounces	100 grams

Table 2. Tips for Estimating Amount of Food Consumed

This table lists some handy tips to help you estimate the amount of food you eat when you cannot measure or weigh it.

Breads and grains

½ cup cooked cereal, pasta, rice	volume of cupcake wrapper or half a baseball
4-oz bagel (large)	diameter of a compact disc (CD)
medium piece of cornbread	medium bar of soap

Fruits and vegetables

medium apple, orange, peach	tennis ball
¼ cup dried fruit	golf ball or scant handful for average adult
½ cup fruit or vegetable	half a baseball
1 cup broccoli	light bulb
medium potato	computer mouse
1 cup raw leafy greens	baseball or fist of average adult
½ cup	6 asparagus spears, 7 or 8 baby carrots or carrot sticks, or a medium ear of corn

Meat, fish, and poultry, cooked

1 oz	about 3 tbsp meat or poultry
2 oz	small chicken drumstick or thigh
3 oz	average deck of cards, palm of average adult's hand, half of a whole, small chicken breast, medium pork chop

Cheese

1 oz hard cheese	average person's thumb, 2 dominoes, 4 dice
------------------	--

Other

2 tbsp peanut butter	Ping-Pong ball
⅓ cup nuts	level handful for average adult
½ cup	half a baseball or base of computer mouse
1 cup	tennis ball or fist of average adult

Note: The serving size indicated in the Food Guide Pyramid and on food labels is a standardized unit of measure and may not represent the portion of food a person actually eats on one occasion.

Table 3. Yield of Cooked Meat per Pound of Raw Meat as Purchased

From the time it is purchased to the time it is eaten, meat undergoes certain losses. These include evaporation of moisture and loss of fat in the drippings during cooking and removal of parts such as bone, gristle, and fat before or after cooking.

This table shows, for several retail cuts, the yield of cooked meat from 1 pound of raw meat. Yield is given as ounces of:

- Cooked meat with bone and fat
- Cooked lean and fat
- Cooked lean only

Among the factors influencing meat yield is the proportion of fat and lean. Many cuts have an outside layer of fat extending all or part way around. The thickness of this fat layer varies depending on the cutting and trimming practices in the market. The information on yield in table 3 and on nutritive value in table 9 applies to retail cuts trimmed according to typical market practices. Deposits of fat within a cut may be extensive. They are not usually affected by retail trimming but may be discarded after cooking.

Table 3. Yield of Cooked Meat per Pound of Raw Meat as Purchased

Retail cut and method of cooking	Parts weighed	Yield after cooking, less drippings Weight (oz)
Chops or steaks for broiling or frying		
With bone and relatively large amount fat, such as pork or lamb chops; beef rib; sirloin, or porterhouse steaks	Lean, bone, and fat	10-12
	Lean and fat	7-10
	Lean only	5-7
Without bone and with very little fat, such as round of beef or veal steaks	Lean and fat	12-13
	Lean only	9-12
Ground meat for broiling or frying, such as beef, lamb, or pork patties	Patties	9-13
Roast for oven cooking (no liquid added)		
With bone and relatively large amount of fat, such as beef rib, loin, chuck; lamb shoulder, leg; pork, fresh or cured	Lean, bone, and fat	10-12
	Lean and fat	8-10
	Lean only	6-9
Without bone	Lean and fat	10-12
	Lean only	7-10
Cuts for pot roasting, simmering, braising, stewing		
With bone and relatively large amount of fat, such as beef chuck, pork shoulder	Lean, bone, and fat	10-11
	Lean and fat	8-9
	Lean only	6-8
Without bone and with relatively small amount of fat, such as trimmed beef, veal	Lean with adhering fat	9-11

Table 4. Recommended Daily Dietary Intakes

Table 4 shows recommended daily levels of calories and several nutrients essential for maintenance of good nutrition in healthy, normally active persons. The Recommended Dietary Allowances (RDAs) are currently being revised by the National Academy of Sciences. The new recommendations are called Dietary Reference Intakes (DRIs) and include two sets of values that serve as goals for nutrient intake—RDAs and Adequate Intakes (AIs). The right side of table 4 presents the DRIs published in 1997-2000, with AIs indicated by a dagger (†). The left side of the table includes the 1989 RDAs. More detailed information about DRIs may be obtained from the table's sources (see note at end of table). Table 4 includes only the nutrients contained in table 9.

* Energy needs shown are based on average size and light-to-moderate activity levels. Individual needs may vary because of sedentary or more physically active lifestyle and/or smaller or larger body size.

† Values represent Adequate Intake.

‡ Expressed as niacin equivalents. 1 mg niacin = 60 mg tryptophan; 0-6 months = preformed niacin, not niacin equivalents.

Note: RDAs and DRIs should not be confused with reference values for food labels established by the U.S. Food and Drug Administration, as follows: vitamin A = 5,000 IU; iron = 18 mg; calcium = 1,000 mg; thiamin = 1.5 mg; riboflavin = 1.7 mg; niacin = 20 mg; vitamin C = 60 mg.

Table 6. Daily Values

Daily Values have been established by the Food and Drug Administration as references to help consumers use information on food labels to plan a healthy overall diet. The Daily Values provide a reliable guide for most people. It is helpful to know that a 2,000-calorie level is about right for moderately active women, teenage girls, and sedentary men, and 2,500 calories is the target level for many men, teenage boys, and active women.

Many older adults, children, and sedentary women need fewer than 2,000 calories a day and may want to select target levels based on 1,600 calories a day. Some active men and teenage boys and very active women may want to select target levels based on 2,800 calories per day. The Daily Values for sodium and cholesterol are the same for everyone, regardless of total calories consumed, so you do not have to make adjustments based on your caloric needs.

Nutrient	Calories	2,000	2,500
Total fat*	Less than	65 g	80 g
Saturated fat†	Less than	20 g	25 g
Cholesterol	Less than	300 mg	300 mg
Sodium	Less than	2,400 mg	2,400 mg
Total carbohydrate		300 g	375 g
Dietary fiber		25 g	30 g
Potassium		3,500 mg	3,500 mg

* Total fat values are based on 30 percent of calories.

† Saturated fat values are based on 10 percent of calories.

Note. Your Daily Values may be higher or lower depending on your calorie needs. The Daily Values are based on expert dietary advice about how much, or how little, of some key nutrients you should eat each day, depending on whether you eat 2,000 or 2,500 calories a day.

Source: U.S. Food and Drug Administration (1999)

Table 7. Amount of Total Fat That Provides 30 Percent of Calories and Saturated Fat That Provides 10 Percent

Several scientific groups suggest that Americans moderate the amount of fat in their diets. Some recommend that fat be limited to amounts that will provide no more than 30 percent of calories. Table 7 lists the amount of fat that provides 30 percent of calories for diets at different total daily calorie levels. For example, a woman wishing to moderate

her fat intake to 30 percent of her 2,000-calorie diet is advised to select foods that total no more than 65 grams of fat per day. She can use table 9 to estimate the grams of fat in the foods she eats.

Table 7 also shows the amount of saturated fat that provides 10 percent of calories for diets at several different daily calorie levels. The amounts of saturated fat are given in upper limits because of that type of fat's ability to raise blood cholesterol levels.

Table 7. Amount of Total Fat That Provides 30 Percent of Calories and Saturated Fat That Provides 10 Percent

Total calories per day	Total fat (g) (no more than 30% of total calories)	Saturated fat (g) (no more than 10% of total calories)
1,600	53	18
2,000*	65	20
2,200	73	24
2,500*	80	25
2,800	93	31

* Percent Daily Values on Nutrition Facts Labels are based on a 2,000-calorie diet. Values for 2,000 and 2,500 calories are rounded to the nearest 5 g to be consistent with the label.

Table 9. Nutritive Value of the Edible Part of Food

Table 9 lists the nutritive values of foods commonly consumed in the United States and makes up the bulk of this publication. The data source is USDA Nutrient Database for Standard Reference, Release 13 (U.S. Department of Agriculture, Agricultural Research Service 2000). See Further Information for more about this database. Most differences in values between this table and the Standard Reference are due to rounding.

Foods are grouped under the following headings:

- Beverages
- Dairy products
- Eggs
- Fats and oils
- Fish and shellfish
- Fruits and fruit juices
- Grain products
- Legumes, nuts, and seeds
- Meat and meat products
- Mixed dishes and fast foods
- Poultry and poultry products
- Soups, sauces, and gravies
- Sugars and sweets
- Vegetables and vegetable products
- Miscellaneous items.

Most of the foods listed are in ready-to-eat form. Some are basic products widely used in food preparation, such as flour, oil, and cornmeal. Most snack foods, a separate food group in the Standard Reference, are found under Grain Products.

Measures and weights. The approximate measure given for each food is in cups, ounces, pounds, some other well-known unit, or a piece of a specified size. The measures do not necessarily represent a serving, but the unit given may be used to calculate a variety of serving sizes. For example, nutrient values are given for 1 cup of applesauce. If the serving you consume is $\frac{1}{2}$ cup, divide the values by 2 or multiply by 0.5.

For fluids, the cup measure refers to the standard measuring cup of 8 fluid ounces. The ounce is one-sixteenth of a pound, unless “fluid ounce” is indicated. The weight of a fluid ounce varies

according to the food. If the household measure of a food is listed as 1 ounce, the nutrients are based on a weight of 28.35 grams, rounded to 28 grams in the table. All measure weights are actual weights or rounded to the nearest whole number. See table 2, Tips for Estimating Amount of Food Consumed, for help in determining the size of the portion you actually eat or drink.

The table gives the weight in grams for an approximate measure of each food. The weight applies to only the edible portion (part of food normally eaten), such as the banana pulp without the peel. Some poultry descriptions provide weights for the whole part, such as a drumstick, including skin and/or bone. Keep in mind that the nutritive values are only for the edible portions indicated in the description. For example, item 877, roasted chicken drumstick, indicates a weight of 2.9 oz (82 grams) with the bone and skin. But note that the weight of one drumstick, meat only, is listed as 44 grams (about $1\frac{1}{2}$ oz). So the skin and bone equal 38 grams (82 minus 44). Nutrient values are always given for the gram weight listed in the column Weight—in this case, 44 grams.

Food values. Values are listed for water; calories; protein; total fat; saturated, monounsaturated, and polyunsaturated fatty acids; cholesterol; carbohydrate; total dietary fiber; four minerals (calcium, iron, potassium, and sodium); and five vitamins (vitamin A, thiamin, riboflavin, niacin, and ascorbic acid, or vitamin C). Water content is included because the percentage of moisture is helpful for identification and comparison of many food items. For example, to identify whether the cocoa listed is powder or prepared, you could check the water value, which is much less for cocoa powder. Values are in grams or milligrams except for water, calories, and vitamin A.

Food energy is reported as calories. A calorie is the unit of measure for the amount of energy that protein, fat, and carbohydrate furnish the body. Alcohol also contributes to the calorie content of alcoholic beverages. The official unit of measurement for food energy is actually kilocalories (kcal), but the term “calories” is commonly used in its place. In fact, “calories” is used on the food label.

Vitamin A is reported in two different units: International Units (IU) are used on food labels and in the past for expressing vitamin A activity; Retinol Equivalents (RE) are the units released in 1989 by the Food and Nutrition Board for expressing the RDAs for vitamin A.

Values for calories and nutrients shown in table 9 are the amounts in the part of the item that is customarily eaten—corn without cob, meat without bones, and peaches without pits. Nutrient values are averages for products presented here. Values for some nutrients may vary more widely for specific food items. For example, the vitamin A content of beef liver varies widely, but the values listed in table 9 represent an average for that food.

In some cases, as with many vegetables, values for fat may be trace (Tr), yet there will be numerical values listed for some of the fatty acids. The values for fat have been rounded to whole numbers, unless they are between 0 and 0.5; then they are listed as trace. This definition of trace also applies to the other nutrients in table 9 that are rounded to whole numbers.

Other uses of “trace” in table 9 are:

- For nutrients rounded to one decimal place, values falling between 0 and 0.05 are trace.
- For nutrients rounded to two decimal places, values falling between 0 and 0.005 are trace.

Thiamin, riboflavin, niacin, and iron values in enriched white flours, white bread and rolls, cornmeals, pastas, farina, and rice are based on the current enrichment levels established by the Food and Drug Administration. Enrichment levels for riboflavin in rice were not in effect at press time and are not used in table 9. Enriched flour is used in most home-prepared and commercially prepared baked goods.

Niacin values given are for preformed niacin that occurs naturally in foods. The values do not include additional niacin that may be formed in the body from tryptophan, an essential amino acid in the protein of most foods.

Nutrient values for many prepared items were calculated from the ingredients in typical recipes. Examples are biscuits, cornbread, mashed potatoes,

white sauce, and many dessert foods. Adjustments were made for nutrient losses during cooking.

Nutrient values for toast and cooked vegetables do not include any added fat, either during preparation or at the table. Cutting or shredding vegetables may destroy part of some vitamins, especially ascorbic acid. Since such losses are variable, no deduction has been made.

Values for cooked dry beans, vegetables, pasta, noodles, rice, cereal, meat, poultry, and fish are without salt added. If hot cereals are prepared with salt, the sodium content ranges from about 324-374 mg for Malt-O-Meal, Cream of Wheat, and rolled oats. The sodium value for corn grits is about 540 mg; sodium for Wheatena is about 238 mg. Sodium values for canned vegetables labeled as “no salt added” are similar to those listed for the cooked vegetables.

The mineral contribution of water was not considered for coffee, tea, soups, sauces, or concentrated fruit juices prepared with water. Sweetened items contain sugar unless identified as artificially sweetened.

Several manufactured items—including some milk products, ready-to-eat breakfast cereals, imitation cream products, fruit drinks, and various mixes—are included in table 9. Such foods may be fortified with one or more nutrients; the label will describe any fortification. Values for these foods may be based on products from several manufacturers, so they may differ from the values provided by any one source. Nutrient values listed on food labels may also differ from those in table 9 because of rounding on labels.

Nutrient values represent meats after they have been cooked and drained of the drippings. For many cuts, two sets of values are shown: meat including lean and fat parts, and lean meat from which the outer fat layer and large fat pads have been removed either before or after cooking.

In the entries for cheeseburger and hamburger in Mixed Dishes and Fast Foods, “condiments” refers to catsup, mustard, salt, and pepper; “vegetables” refers to lettuce, tomato, onion, and pickle; “regular” is a 2-oz patty, and large is a 4-oz patty (precooked weight).

The **Food Guide Pyramid** can help you choose a variety of foods to help achieve a balanced diet. Selecting foods from each group will provide the many nutrients our bodies need.

Food Guide Pyramid A Guide to Daily Food Choices

What Counts as One Serving?

The amount of food that counts as one serving is listed below. If you eat a larger portion, count it as more than 1 serving. For example, a dinner portion of spaghetti would count as 2 or 3 servings of pasta.

No specific serving size is given for the fats, oils, and sweets group because the message is **USE SPARINGLY**.

Milk, Yogurt, and Cheese

1 cup of milk or yogurt
 1½ ounces of natural cheese
 2 ounces of processed cheese

Meat, Poultry, Fish, Dry Beans, Eggs, and Nuts

2-3 ounces of cooked lean meat, poultry, or fish
 1½ cup of cooked dry beans, 1 egg, or 2 tablespoons of peanut butter count as 1 ounce of lean meat

Vegetable

1 cup of raw leafy vegetables
 ½ cup of other vegetables, cooked, or chopped raw
 ¾ cup of vegetable juice

Fruit

1 medium apple, banana, orange
 ½ cup of chopped, cooked, or canned fruit
 ¾ cup of fruit juice

Bread, Cereal, Rice, and Pasta

1 slice of bread
 1 ounce of ready-to-eat cereal
 ½ cup of cooked cereal, rice, or pasta
