2011WRSBNDATA.xls: Excel[©] files containing data for the 2011 Western Regional Spring Barley Nursery in both English and metric format.

This is a joint progress report of cooperative investigations underway in the State Agricultural Experiment Stations and the Agricultural Research Service of the U.S. Department of Agriculture. This report contains preliminary data which have not been sufficiently confirmed to justify general release; interpretations may be modified with additional experimentation. Confirmed results will be published through established channels. This report is primarily a tool for use by cooperators, their official staffs and those persons having direct and special interest in the development of agricultural research programs.

This report includes data furnished by the State Agricultural Experiment Stations as well as by the Agricultural Research Service and was compiled in the Northern Plains Area and the Pacific West Area, Agricultural Research Service, U.S. Department of Agriculture. The report is not intended for publication and should not be referred to in literature citations nor quoted in publicity or advertising. Use of the data may be granted for certain purposes upon written request to the agency or agencies involved.

2011 WESTERN REGIONAL SPRING BARLEY NURSERY

The **Western Regional Spring Barley Nursery** is intended to be grown under all climatic conditions in the Pacific Northwest and Northern Great Plains. It contains both 2- and 6-rowed feed and malting barley.

2011 nursery sites that were harvested and summarized for yield and/or agronomic characters from 13 locations are:

- | | | |
|---------------------|-----------------------|--------------------|
| (1) Aberdeen, ID | (7) Minot, ND | (13) Saskatoon, SK |
| (2) Idaho Falls, ID | (8) Williston, ND | |
| (3) Tetonia, ID | (9) Logan, UT | |
| (4) Bozeman, MT | (10) Mt. Stirling, UT | |
| (5) Conrad, MT | (11) Pullman, WA | |
| (6) Hettinger, ND | (12) Powell, WY | |

Observation nurseries were grown at St. Paul, MN, Pullman, WA, and Mt. Vernon, WA. Data was not available from the Fairfield, MT and Langdon, ND locations. Yield data from Minot, ND was not reported due to spot flooding and dye-back. Data from Hettinger, ND and Powell, WY were not included in the data analysis but are shown in the tables. The Ug99 disease ratings were not available from St. Paul at the time of publication.

General Information

The entry list for the 2011 Western Regional Spring Barley Nursery is shown in Table 1. In 2011, commercial cultivars were again entered into the nursery, including those from Busch Agricultural Resources (6 lines), and Western Plant Breeders (1 check).

There were 31 entries in this nursery in 2011. 16 of the 27 entries (besides checks) in the 2010 WRSBN nursery were dropped in 2011. These were: MT020155, MT020204, MT030042, all tested 4 years; 2Ab04-X00017-4, BZ505-172, BZ505 192, MT040073, UT99B1670-3530, 04WA-113.22, 04WNZ-124, CDC Meredith, CDC Coalition, and CDC Austenson, all tested 2 years; and 2B07-1562, 2ND26328, and 05WA-329.49, all tested 1 year. New entries in the test were: 2B07-1516, 01Ab9663, 2Ab04-X01084-27, MT020162, MT061169, MT070111, 2ND24388, 2ND25272, 2ND26333, ND23898, UT6R2120-14, 06WA-412.4, WAS 2, 2004NZ151, 2004NZ163, and CDC Kindersley.

Data Analysis

Computer software, in Excel[®] format, was used to obtain the cultivar means and period of years summary for all characteristics. With this software, we were also able to calculate the coefficient of variation (C.V.) and the Least Significant Difference (LSD) at the .05 level for grain yield. These two statistics are included to provide some indication of the variability in the individual test locations and an indication of cultivar rank at each location and the overall average.

Data Highlights

Seasonal measurements for the check cultivars Baronesse, Steptoe, Harrington, and CDC Metcalfe (Table 2), for 2009 through 2011, show that the check's mean grain yield for the 2011

season was lower than average for the years tested and lowest of the three years; 1.14 Mg ha⁻¹ lower than 2009, and 0.82 Mg ha⁻¹ lower than 2010. Test weight was lower than average and 2009, plant height was shorter than the previous two years, heading date was later than average and the previous years, percent plump barley was 8.00 percent lower than average, and protein was the second highest recorded of the three years and 0.31 percent higher than average.

In 2011 the highest yielding entry over all locations was the 6-rowed feed cultivar UT04B2041-42 at 4.92 Mg ha⁻¹ (Table 3), followed by 2004NZ151, a 2-rowed feed cultivar, at 4.90 Mg ha⁻¹. The next highest was UT6R2120-14, a 6-rowed feed type, at 4.89 Mg ha⁻¹, and the fourth highest was Baronesse, the 2-rowed feed check, at 4.87 Mg ha⁻¹. The highest yielding malting type barley was 02Ab17271, ranked 9th at 4.73 Mg ha⁻¹. The next highest yielding malting barley was 2B04-175, ranked 10th at 4.66 Mg ha⁻¹. The top 14 entries had statistically equal yields at the 95% confidence level. Except for Baronesse, the check cultivars ranked 20th or less. 2004NZ163 had the highest test weight at 686.3 kg m⁻³. 2ND24388 had the highest percent plump barley at 93.0%.

In the period of years summary for 2009 through 2011 (Table 4), Baronesse was the highest yielding entry with at least two years data at 5.65 Mg ha⁻¹. UT04B2041-42 (6-rowed feed type) was the next highest yielding entry with 2 years data at 5.63 Mg ha⁻¹. 2B04-175, a 2-rowed malting type, was next highest at 5.44 Mg ha⁻¹. Of the lines tested at least 2 years, Baronesse had the highest test weight at 678.0 kg m⁻³, and 2ND25276 had the highest percent plump barley at 92.3%.

Tables 5 through 12 present the 2011 WRSBN data summarized over locations for grain yield, test weight, height, heading date, plump barley, lodging, percent protein, and disease ratings.

* IT = Infection type, % = percent leaf area infected.

NOTE: Because barley stripe rust was low at both Pullman and Mt. Vernon locations, no matter of severity, entries with IT 8 should be considered susceptible.

Entries without rust (0) may not be resistant.
